Strong Interaction:

Matter and Interactions Ruth W. Chabay, Bruce A. Sherwood, 2011 Matter and Interactions offers a modern curriculum for introductory physics calculus based. It presents physics the way practicing physicists view their discipline and integrates 20th Century physics and computational physics. The text emphasizes the small number of fundamental principles that underlie the behavior of matter and models that can explain and predict a wide variety of physical phenomena. Matter and Interactions will be available as a single volume hardcover text and also two paperback volumes. Nuclear Science Abstracts, 1974

Introduction to Strong Interactions Andrey Grabovsky, 2022-12-27 This is a problem oriented introduction to the main ideas, methods, and problems needed to form a basic understanding of the theory of strong interactions. Each section contains solid but concise technical foundations to key concepts of the theory and the level of rigor is appropriate for readers with a background in physics rather than mathematics. It begins with a foundational introduction to topics including SU(N) group, hadrons, and effective SU(3) symmetric flavor Lagrangians, constituent quarks in hadrons, quarks and gluons as fundamental fields. It then discusses Quantum Chromodynamics as a gauge field theory, functional integration, and Wilson lines and loops, before moving on to discuss gauge fixing and Faddeev-Popov ghosts, Becchi-Rouet-Stora-Tyutin symmetry, and lattice methods. It concludes with a discussion on the anomalies and the strong CP problem, effective action, chiral perturbation theory, deep inelastic scattering, and derivation and solution of the Dokshitzer-Gribov-Lipatov-Altarelli-Parisi equations. Constructed as a one-term course on strong interactions for advanced students, it will be a useful self-study guide for graduate and PhD students of high energy physics. Quantum Chromodynamics and the Standard Model. Features covers both basic introductory topics in addition to more advanced content. Accompanied by over 200 problems starting from group algebra to the derivation of Migdal-Makeenko equations, Kim-Shifman-Vainshtein-Zakharov axion and gluon-gluon to Higgs cross section, etc. Solutions are incorporated into the chapters to test understanding.
