IUTAM Symposium on Surface Effects in the Mechanics of Nanomaterials and Heterostructures Alan Cocks, Jianxiang Wang, 2012-09-26 This volume constitutes the proceedings of the IUTAM Symposium on Surface Effects in the Mechanics of Nanomaterials and Heterostructures held in Beijing 8-12 August 2010. The symposium brought together the most active scientists working in this area from the fields of solid mechanics, composites, physics and materials science and summarized the state of the art research results with a view to advancing the frontiers of mechanics and materials physics. Nanomaterials and heterostructures have a large fraction of their atoms at surfaces and interfaces. These atoms see a different environment to those in the interior and can have a substantial effect on the overall mechanical and physical behaviour of a material. The last decade has witnessed a growing interest in the study of surfaces and how the surface behaviour couples with that of the bulk to determine the overall system response. The papers in this proceedings cover extension of continuum mechanics and thermodynamics to the nano scale, multiscale simulations, surface effects in monolithic nano scale elements and nanostructures, mechanical and physical properties of nanomaterials and heterostructures, self assembly etc. The surface stress effect is inherently a multidisciplinary and fertile field. The Symposium truly reflects these features. This IUTAM Symposium was also dedicated to Professor Bhushan L. Karihaloo of Cardiff University on his impending retirement in recognition of his contributions to the fields of solid mechanics and nanomechanics and to IUTAM activities in general. II

Proceedings of the International Symposium on Frontiers of Science Chen Ning Yang, Hwa-Tung Nieh, 2003. The International Symposium on Frontiers of Science was held to celebrate the 80th birthday of Chen Ning Yang, one of the great physicists of the 20th century and arguably the most admired living scientist in China today. Many of the world's great scientists, including sixteen Nobel laureates, Fields medallists and Wolf Prize winners, converged on Beijing from all corners of the globe to pay tribute to Professor Yang. The Symposium was organized by Tsinghua University, with which Professor Yang has had a lifelong relationship. In 1997, he helped to found the Center for Advanced Study at Tsinghua and was appointed to the university's faculty, and has since devoted his energy to the growth of the Center. This unique and invaluable birthday volume is a collection of the presentations made at the Symposium, including fifteen plenary talks, seven of which are by Nobel laureates. It covers a wide range of topics and mirrors Professor Yang's research and intellectual interests. The range of fields encompasses high energy condensed matter, mathematical, applied, bio, astro, atomic and quantum physics. Also included are talks given at the birthday banquet. About C. N. Yang: Born in 1922 in Anwei, China, C. N. Yang was brought up in the academic

atmosphere of Tsinghua University in Beijing where his father was a professor of mathematics He received his college education at the National Southwest Associated University in Kunming China and completed his BSc there in 1942 His MSc was received in 1944 from Tsinghua University He entered the University of Chicago in 1946 where he came under the strong influence of Prof E Fermi After receiving his PhD in 1948 Prof Yang served for a year at the University of Chicago as an instructor Since 1949 he has been associated with the Institute for Advanced Study Princeton where he became a professor in 1955 Prof Yang has worked on various subjects in physics but is mainly interested in statistical mechanics and symmetry principles He is a prolific author his numerous articles appearing in the Bulletin of the American Mathematical Society The Physical Review Reviews of Modern Physics and the Chinese Journal of Physics Prof Yang won the Nobel Prize in Physics in 1957 jointly with T D Lee He has been elected a Fellow of the American Physical Society and of Academia Sinica

Structure-property Relationships of Oxide Surfaces and Interfaces, 2003 **Seventh IUTAM Symposium on Laminar-Turbulent Transition** Philipp Schlatter, Dan S. Henningson, 2010-03-11 The origins of turbulent flow and the transition from laminar to turbulent flow are the most important unsolved problems of fluid mechanics and aerodynamics sides being a fundamental question of fluid mechanics there are numerous applications relying on information regarding transition location and the details of the subsequent turbulent flow For example the control of transition to turbulence is especially important in 1 skin friction reduction of energy efficient aircraft 2 the performance of heat exchangers and diffusers 3 propulsion requirements for supersonic aircraft and 4 separation control While considerable progress has been made in the science of laminar to turbulent transition over the last 30 years the continuing increase in computer power as well as new theoretical developments are now revolutionizing the area It is now starting to be possible to move from simple 1D eigenvalue problems in canonical flows to global modes in complex flows all accompanied by accurate large scale direct numerical simulations DNS Here novel experimental techniques such as modern particle image velocimetry PIV also have an important role Theoretically the influence of non normality on the stability and transition is gaining importance in particular for complex flows At the same time the enigma of transition in the oldest flow investigated Reynolds pipe flow transition experiment is regaining attention Ideas from dynamical systems together with DNS and experiments are here giving us new insights

Structure-Property Relationships of Oxide Surfaces and Interfaces II: Volume 751 Materials Research Society. Meeting, 2003-05-21 Because surfaces and interfaces found in oxide systems are strikingly complex they can only be fully understood when examined at an atomic level Yet for the materials scientist such understanding is of paramount importance since future technological advances require it This book the second in a new series from the Materials Research Society addresses structure property relationships in these systems Compared to the first proceedings here we see a shift towards less well defined materials that often more closely resemble reality and an increasing effort to study these phenomena using in situ techniques Of particular interest are discussions on the dynamical evolution of surface structure and relationships

between the structure of surfaces their stoichiometry and the distribution of bulk dislocations which in turn can control the growth and retraction of islands and pits Modeling and characterization of thin intergranular films with a focus on how these films influence the properties of so many ceramic materials are also addressed *10th PhD Symposium in Quebec Canada*
