*Degrowth in the Suburbs* Samuel Alexander, Brendan Gleeson, 2018-09-21 This book addresses a central dilemma of the urban age how to make the vast suburban landscapes that ring the globe safe and sustainable in the face of planetary ecological crisis The authors argue that degrowth a planned contraction of economic overshoot is the only feasible principle for suburban renewal They depart from the anti suburban sentiment of much environmentalism to show that existing suburbia can be the centre ground of transition to a new social dispensation based on the principle of self limitation The book offers a radical new urban imaginary that of degrowth suburbia which can arise Phoenix like from the increasingly stressed cities of the affluent Global North and guide urbanisation in a world at risk This means dispensing with much contemporary green thinking including blind faith in electric vehicles and high density urbanism and accepting the inevitability and the benefits of planned energy descent A radical but necessary vision for the times      **Urban Sustainability Transitions**

Trivess Moore, Fjalar de Haan, Ralph Horne, Brendan James Gleeson, 2017-10-27 This book contributes to current debates regarding purposive transitions to sustainable cities providing an accessible but critical exploration of sustainability transitions in urban settings We have now entered the urban century which is not without its own challenges as discussed in the preceding book of this series Urbanization is accompanied by a myriad of complex and overlapping environmental social and governance challenges which increasingly call into question conventional market based responses and simple top down government interventions Faced with these challenges urban practitioners and scholars alike are interested in promoting purposive transitions to sustainable cities The chapters in this volume contribute to the growing body of literature on city scale transformative change which seeks to address a lack of consideration for spatial and urban governance dimensions in sustainability transitions studies and expand on the basis established in the preceding book Drawing on a range of perspectives and written by leading Australian and international urban researchers the chapters explore contemporary cases from Australia and locate them within the international context Australia is on the one hand representative of many OECD countries while on the other possessing a number of unique attributes that may serve to highlight issues and potentials internationally Australia is a highly urbanized country and because of the federal political structure and the large distances the five largest state capital cities have a relatively high degree of autonomy in governance even dominating the rest of their respective states and rural hinterlands to a certain extent This context suggests that Australian cases can provide interesting test tube perspectives on processes relevant to urban sustainability transitions worldwide This volume presents an extensive overview of theories concepts approaches and practical examples informed by sustainability transitions thinking offering a unique resource for all urban practitioners and scholars who want to understand and transition to sustainable urban futures
