Lee, Barney Dalgarno, Belinda Tynan, 2016-04-01 Three dimensional 3D immersive virtual worlds have been touted as being capable of facilitating highly interactive engaging multimodal learning experiences Much of the evidence gathered to support these claims has been anecdotal but the potential that these environments hold to solve traditional problems in online and technology mediated education primarily learner isolation and student disengagement has resulted in considerable investments in virtual world platforms like Second Life OpenSimulator and Open Wonderland by both professors and institutions To justify this ongoing and sustained investment institutions and proponents of simulated learning environments must assemble a robust body of evidence that illustrates the most effective use of this powerful learning tool In this authoritative collection a team of international experts outline the emerging trends and developments in the use of 3D virtual worlds for teaching and learning They explore aspects of learner interaction with virtual worlds such as user wayfinding in Second Life communication modes and perceived presence and accessibility issues for elderly or disabled learners They also examine advanced technologies that hold potential for the enhancement of learner immersion and discuss best practices in the design and implementation of virtual world based learning interventions and tasks By evaluating and documenting different methods approaches and strategies the contributors to Learning in Virtual Worlds offer important information and insight to both scholars and practitioners in the field *Legal Issues in Global Contexts* Kirk St. Amant, Martine Rife, 2016-12-05 Today it has been said the world is flat as online media allow information to move easily from point to point

across the earth International legal differences however are increasingly affecting the ease with which data and ideas can be shared across nations Copyright law for example affects the international flow of materials by stipulating who has the right to replicate or to share certain kinds of content Similarly perspectives on privacy rights can differ from nation to nation and affect how personal information is shared globally Moreover national laws can affect the exchange of ideas by stipulating the language in which information must be presented in different geopolitical regions Today s technical communicators need to understand how legal factors can affect communication practices if they wish to work effectively in global contexts This collection provides an overview of different legal aspects that technical communicators might encounter when creating materials or sharing information in international environments Through addressing topics ranging from privacy rights and information exchange to the legalities of business practices in virtual worlds and perspectives on authorship and ownership the contributors to this volume examine a variety of communication based legal issues that can cause problems or miscommunication in international interactions Reviewing such topics from different perspectives the authors collectively provide ideas that could serve as a foundation for creating best practices on or for engaging in future research in the area of legal issues in international settings

**The Decline Effect** Dean Brooks, 2023-01-31 A crisis is coming for everyone who uses math and science For decades now the classical model of probability the indifference principle and the Gaussian distribution has been breaking down and revealing its limitations in fields from economics to epidemiology Now a new approach has revealed the underlying non classical principle behind all these anomalous laws Pareto s law of elite incomes Zipf s law of word frequencies Lotka s law of scientific publications Kleiber s law of metabolic rates the Clausewitz Dupuy law of combat friction Moore s law of computing costs the Wright Henderson cost law Weibull s law of electronics failures the Flynn Effect in IQ scores Benford s law of digit frequencies Farr s law of epidemics Hubbell s neutral theory of biodiversity Rogers law of innovation classes Wilson s law of island biogeography Smeed s law of traffic fatalities The general law behind all these particular laws and countless others is the decline effect As a system ages or grows in size the rules of probability subtly change Entropy increases rare items become rarer and average performance measures decline The human meaning of a decline may be positive decreasing costs falling epidemic mortality or negative lower customer loyalty decreasing efficiency but the mathematical pattern is always the same The implications are enormous as these examples show All epidemic diseases decline in infectiousness and in lethality HIV AIDS went from a highly infectious 95 percent fatal disease to a survivable condition with a latency of decades COVID 19 went from a death rate of 7 percent in early 2020 to under 2 percent in 2022
