*The Timespace of Human Activity* Theodore R. Schatzki, 2010-04-12 This book shows that a concept of activity timespace drawn from the work of Martin Heidegger provides new insights into the nature of activity society and history Although the book is a work of theory it has significant implications for the determination and course not just of activity but of sociohistorical change as well Drawing on empirical examples the book argues 1 that timespace is a key component of the overall space and time of social life 2 that interwoven timespaces form an essential infrastructure of important social phenomena such as power coordinated actions social organizations and social systems and 3 that history encompasses constellations of indeterminate temporalspatial events The latter conception of history in turn yields a propitious account of how the past exists in the present In addition because the concept of activity timespace highlights the teleological character of human action the book contains an extensive defense of the teleological character of such allegedly ateleological forms of activity as emotional and ceremonial actions Since finally the book's ideas about timespace and activity as an indeterminate event derive from an interpretation of Heidegger the work furthers understanding of the relevance of his thought for social and historical theory The book combines textual interpretation theoretical argumentation and empirical substantiation Many of its empirical examples are taken from the Blue Grass Horse Country around Lexington Kentucky where the author resides

Professional Practice and Learning Nick Hopwood, 2016-01-22 This book explores important questions about the relationship between professional practice and learning and implications of this for how we understand professional expertise Focusing on work accomplished through partnerships between practitioners and parents with young children the book explores how connectedness in action is a fluid evolving accomplishment with four essential dimensions times spaces bodies and things Within a broader sociomaterial perspective the analysis draws on practice theory and philosophy bringing different schools of thought into productive contact including the work of Schatzki Gherardi and recent developments in cultural historical activity theory The book takes a bold view suggesting practices and learning are entwined but distinctive phenomena A clear and novel framework is developed based on this idea The argument goes further by demonstrating how new coproductive relationships between professionals and clients can intensify the pedagogic nature of professional work and showing how professionals can support others learning when the knowledge they are working with and sense of what is to be learned are uncertain incomplete and fragile
