Two Way Cut:

Combinatorial Optimization Bernhard Korte, Jens Vygen, 2013-06-29 Combinatorial optimization is one of the youngest and most active areas of discrete mathematics and is probably its driving force today It became a subject in its own right about 50 years ago This book describes the most important ideas theoretical results and algorithms in combinatorial optimization We have conceived it as an advanced graduate text which can also be used as an up to date reference work for current research The book includes the essential fundamentals of graph theory linear and integer programming and complexity theory It covers classical topics in combinatorial optimization as well as very recent ones The emphasis is on theoretical results and algorithms with provably good performance Applications and heuristics are mentioned only occasionally Combinatorial optimization has its roots in combinatorics operations research and theoretical computer science A main motivation is that thousands of real life problems can be formulated as abstract combinatorial optimization problems We focus on the detailed study of classical problems which occur in many different contexts together with the underlying theory Most combinatorial optimization problems can be formulated naturally in terms of graphs and as integer linear programs Therefore this book starts after an introduction by reviewing basic graph theory and proving those results in linear and integer programming which are most relevant for combinatorial optimization *Proceedings of the Fourth Annual ACM-SIAM Symposium on Discrete Algorithms*, 1993-01-01 Annotation Proceedings of a conference that took place in Austin Texas in January 1993 Contributors are impressive names from the field of computer science including Donald Knuth author of several computer books of biblical importance The diverse selection of paper topics includes dynamic point location ray shooting and the shortest paths in planar maps optimistic sorting and information theoretic complexity and an optimal randomized algorithm for the cow path problem No index Annotation copyright by Book News Inc Portland OR Manual of Classification of Patents ...
