report are To put on record the development scope and type of operations involved in the July 16 1945 atomic bomb test with recommendations for future operating procedure to collect in one place all the reports relating to the apparatus and results planning and administration A test of the atomic bomb was considered essential by the Director and most of the group and division leaders of the Laboratory because of the enormous step from the differential and integral experiments and theory to a practical gadget No one was content that the first trial of a Fat Man F M gadget should be over enemy territory where if the gadget failed the surprise factor would be lost and the enemy might be presented with a large amount of active material in recoverable form The only thing that could finally settle the many questions current before the test was an actual experiment with full instrumentation Plans were made for yields from 100 10000 tons with the most probable value 4000 tons July 10 1945 The safety of personnel and structures was insured for yields as great as 200000 tons The final functioning of the bomb showed that the prior work had been excellent in every respect and no vital factor had been overlooked In the winter and spring of 1944 the possibility that the first test bomb would not work at all was constantly in mind Discussions had been held between S Neddermeyer G B Kistiakowsky J R Oppenheimer and others to consider the construction of a large pressure vessel that would be able to contain the active material and products of the explosion of a high explosive if the operation of the first atomic bomb should be a complete fizzle The need for the containing vessel was based on the uncertainties of the behaviour of the bomb and the desirability of conserving active material Contents include CALIBRATION AND REHEARSAL SHOT Plan and Organization Firing of 100 Ton Shot Results of the 100 Ton Shot Report on First Trinity Test Purpose of Test General Character of the Test Program of Measurement and Observation Organization for Carrying Out the Program Behaviour of the Implosion Nuclear Energy Released Damage Effects Produced Overall Behaviour of the Explosion and Its After Effects Meteorological Observations Health Control Conclusion Post 100 Ton Suggestions For Improved Facilities and Procedure Suggestions for Improvements Conclusions Concerning the 100 Ton Test PREPARATIONS FOR THE JULY 16 TEST Coordination of Preparations Consultants Weekly Meetings Acceptance of New Experiments Prompt Dissemination of General Information Coordination of Construction FINAL PREPARATIONS FOR REHEARSALS AND TEST Schedule Timing and Wiring Layout Electronics Shelter Chiefs Arming Party Location and Time of Shot Protection Against Radiation Base Camp Directions Health and Monitoring Organization and Preparations Introduction Organization of Medical Group TR 7 Equipment of Medical Group Plans for Monitoring Before Shot Plans for Monitoring Time of Shot Plans for Monitoring After Shot Immediate Hazards Delayed Hazards Meteorology WORK PRECEDING AND INCLUDING ASSEMBLY AT TRINITY Preliminary Tests Preparations at Y Procedure for Final Assembly RADIAL DISTRIBUTION OF NEUTRONS GAMMA RADIATION AND THERMAL RADIATION Neutrons Fast Prompt Neutrons *Dimensional Analysis Beyond the Pi Theorem* Bahman Zohuri,2016-11-02 Dimensional Analysis and Physical Similarity are well understood subjects and the general concepts of dynamical similarity are explained in this book Our exposition is essentially different from those available

in the literature although it follows the general ideas known as Pi Theorem There are many excellent books that one can refer to however dimensional analysis goes beyond Pi theorem which is also known as Buckingham s Pi Theorem Many techniques via self similar solutions can bound solutions to problems that seem intractable A time developing phenomenon is called self similar if the spatial distributions of its properties at different points in time can be obtained from one another by a similarity transformation and identifying one of the independent variables as time However this is where Dimensional Analysis goes beyond Pi Theorem into self similarity which has represented progress for researchers In recent years there has been a surge of interest in self similar solutions of the First and Second kind Such solutions are not newly discovered they have been identified and named by Zel dovich a famous Russian Mathematician in 1956 They have been used in the context of a variety of problems such as shock waves in gas dynamics and filtration through elasto plastic materials Self Similarity has simplified computations and the representation of the properties of phenomena under investigation It handles experimental data reduces what would be a random cloud of empirical points to lie on a single curve or surface and constructs procedures that are self similar Variables can be specifically chosen for the calculations

The History and Science of the Manhattan Project Bruce Cameron Reed,2019-02-19 The development of atomic bombs under the auspices of the U S Army s Manhattan Project during World War II is considered to be the outstanding news story of the twentieth century In this book a physicist and expert on the history of the Project presents a comprehensive overview of this momentous achievement The first three chapters cover the history of nuclear physics from the discovery of radioactivity to the discovery of fission and would be ideal for instructors of a sophomore level Modern Physics course Student level exercises at the ends of the chapters are accompanied by answers Chapter 7 covers the physics of first generation fission weapons at a similar level again accompanied by exercises and answers For the interested layman and for non science students and instructors the book includes extensive qualitative material on the history organization implementation and results of the Manhattan Project and the Hiroshima and Nagasaki bombing missions The reader also learns about the legacy of the Project as reflected in the current world stockpiles of nuclear weapons This second edition contains important revisions and additions including a new chapter on the German atomic bomb program and new sections on British and Canadian contributions to the Manhattan project and on feed materials Several other sections have been expanded reader feedback has been helpful in introducing minor corrections and improved explanations and last but not least the second edition includes a detailed index

The Manhattan Project B. Cameron Reed,2017-05-22 The development of nuclear weapons by the Manhattan Project during World War II was one of the most dramatic scientific technological episodes in human history This book prepared by a recognized expert on the Manhattan Project offers a concise survey of the essential physics concepts underlying fission weapons The text describes the energetics and timescales of fast neutron chain reactions why only certain isotopes of uranium and plutonium are suitable for use in fission weapons how critical mass and bomb yield

can be estimated how the efficiency of nuclear weapons can be enhanced how the fissile forms of uranium and plutonium were obtained some of the design details of the Little Boy and Fat Man bombs and some of the thermal shock and radiation effects of nuclear weapons Calculation exercises are provided and a Bibliography lists authoritative print and online sources of information for readers who wish to pursue more detailed study of this fascinating topic

[Applied Modeling and Computations in Nuclear Science](#) Thomas M. Semkow, 2007 This book will broach the topics of applied nuclear science in general and nuclear chemistry in particular where there is usually a modeling or computational component Typically one finds several modelers presenting their work in the course of almost every symposium It's imperative to bring all such theoretical and computational work in applied nuclear science under one umbrella and that's what this book aims to do The nuclear scientists interested in modeling are lacking a broader forum for their research as well as a vehicle to enable those learning related techniques The editors intend to include several topics radiation risk assessment radiation transport contaminant transport radiation dosimetry modeling of experiments detection limits nuclear data analysis and statistical aspects
