The Divinatory Sciences:

The Frontiers of Ancient Science Brooke Holmes, Klaus-Dietrich Fischer, 2015-03-30 Our understanding of science mathematics and medicine today can be deeply enriched by studying the historical roots of these areas of inquiry in the ancient Near East and Mediterranean The fields of ancient science and mathematics have in recent years witnessed remarkable growth The present volume brings together contributions from more than thirty of the most important scholars working in these fields in the United States and Europe in honor of the eminent historian of ancient science and medicine Heinrich von Staden Professor Emeritus of Classics and History of Science at the Institute of Advanced Study and William Lampson Professor Emeritus of Classics and Comparative Literature at Yale University The papers range widely from Mesopotamia to Ancient Greece and Rome from the first millennium B C to the early medieval period and from mathematics to philosophy mechanics to medicine representing both a wide diversity of national traditions and the cutting edge of the international scholarly community *The Cambridge History of Science: Volume 1, Ancient Science* Alexander Jones, Liba Taub, 2018-12-13 This volume in the highly respected Cambridge History of Science series is devoted to the history of science medicine and mathematics of the Old World in antiquity Organized by topic and culture its essays by distinguished scholars offer the most comprehensive and up to date history of ancient science currently available Together they reveal the diversity of goals contexts and accomplishments in the study of nature in Mesopotamia Egypt Greece Rome China and India Intended to provide a balanced and inclusive treatment of the ancient world contributors consider scientific medical and mathematical learning in the cultures associated with the ancient world **Philosophy before the Greeks** Marc Van De Mierop, 2017-02-28 There is a growing recognition that philosophy isn't unique to the West that it didn't begin only with the classical Greeks and that Greek philosophy was influenced by Near Eastern traditions Yet even today there is a widespread assumption that what came before the Greeks was before philosophy In *Philosophy before the Greeks* Marc Van De Mierop an acclaimed historian of the ancient Near East presents a groundbreaking argument that for three millennia before the Greeks one Near Eastern people had a rich and sophisticated tradition of philosophy fully worthy of the name In the first century BC the Greek historian Diodorus of Sicily praised the Babylonians for their devotion to philosophy Showing the justice of Diodorus's comment this is the first book to argue that there were Babylonian philosophers and that they studied knowledge systematically using a coherent system of logic rooted in the practices of cuneiform script Van De Mierop uncovers Babylonian approaches to knowledge in three areas the study of language which in its analysis of the written word formed the basis of all logic the art of divination which interpreted communications between gods and humans and the rules of law which confirmed that royal justice was founded on truth The result is an innovative intellectual history of the ancient Near Eastern world during the many centuries in which Babylonian philosophers inspired scholars throughout the region until the first millennium BC when the breakdown of this cosmopolitan system enabled others including the Greeks to
