Very First Light:

The Very First Light John Boslough, John Mather, 2008-10-20 In the early 1990s a NASA led team of scientists changed the way we view the universe With the COBE Cosmic Background Explorer project they showed that the microwave radiation that fills the universe must have come from the Big Bang effectively proving the Big Bang theory beyond any doubt It was one of the greatest scientific findings of our generation perhaps of all time In *The Very First Light* John Mather one of COBE's leaders and science writer John Boslough tell the story of how it was achieved A gripping tale of big money bigger egos tense politics and cutting edge engineering *The Very First Light* offers a rare insider's account of the world of big science

Blain, Françoise Combes, Bruce T. Draine, 2006-04-18 Modern astronomy has stretched its domains of exploration tremendously Not only objects at very large distances and very old states of the Universe can be examined but also all kinds of radiations and phenomena are now accessible Astronomers constantly move from considerations about very luted to very dense systems Hot and energetic systems being the easiest to observe have attracted a lot of attention However the cold and low energetic states have been so what neglected either because being harder to observe they appear unexc ing or because being less well known they tend to be ignored However the Universe background radiation has now been determined as the most perfect known case of a black body spectrum a substantial fraction of matter spends some time close to the temperature of this universal thermal bath before ingtransformedintostarsorplanets Someobjects suchasrapidlyexpanding gas shells in planetary nebulae may even succeed in reaching a temperature well below the background radiation temperature through the mere action of adiabatic expansion In view of the highly dynamical and turbulent state of the interstellar medium hot and cold temperature uctuations must be expected while the clear observational bias is to observe the hot rather than the cold uctuations Fortunately with the accessibility of far infrared and sub millimetric instruments such

as SCUBA WMAP Planck or ALMA we can expect in the coming years continuous advances in our understanding of these harder to observe cold stages of matter

Beyond the Boundaries of Science Latha Christie,2019-03-29 Is the origin of life a lucky roll of cosmic dice Who is behind the origin of the universe What do the latest scientific discoveries say about the origin of space and time Beyond the Boundaries of Science explores the cosmic puzzles that accompany our greatest scientific advances It suggests that there is more beyond the reach of science a super intelligent Designer behind these mysteries It takes both science and the Bible seriously comparing the latest scientific theories with the account in Genesis interpreted as a revelation of the sequence of our origins

Making Beautiful Deep-Sky Images Greg Parker,2007-10-11 This book is based around the author s beautiful and sometimes awe inspiring color images and mosaics of deep sky objects The book describes how similar Hubble class images can be created by amateur astronomers in their back garden using commercially available telescopes and CCD cameras Subsequent processing and image enhancement in the electronic darkroom is covered in detail as well A range of telescopes and equipment is considered from the author s 11 inch with Hyperstar camera down to more affordable instruments Appendices provide links to free software not available from a single source and are themselves an invaluable resource

Replicating Space Theory Silvio Gonzalez,2022-04-07 Had the author s inventive hypothesis of Replicating Space been envisioned when Isaac Newton published his laws of motion and gravity it would most certainly have been incorporated into our concept of the nature of the Universe The author describes a comprehensive vision of the nature of the heavens their creation and growth He throws in a whopping amount of down to earth explanations of his unique perspective on the origins of everything No stone is left unturned as he destroys conventional academic theories replacing them with simple yet not obvious truths Matter energy light speed space time reality the edge of the Universe are all players in a new more tangible explanation of our Universe All these things along with many more concepts will be explained in light of the new radical Replicating Space theory RST
