Weakly Connected Neural Networks:

Weakly Connected Neural Networks Frank C. Hoppensteadt, Eugene M. Izhikevich, 2012-12-06 This book is devoted to an analysis of general weakly connected neural networks WCNNs that can be written in the form $\dot{x}_i = -x_i + \sum_{j=1}^n g_{ij} x_j$ Here each $x_i \in \mathbb{R}$ is a vector that summarizes all physiological attributes of the i th neuron n is the number of neurons I_i describes the dynamics of the i th neuron and g_{ij} describes the interactions between neurons The small parameter indicates the strength of connections between the neurons Weakly connected systems have attracted much attention since the second half of seventeenth century when Christian Huygens noticed that a pair of pendulum clocks synchronize when they are attached to a light weight beam instead of a wall The pair of clocks is among the first weakly connected systems to have been studied Systems of the form $\dot{x}_i = -x_i + \sum_{j=1}^n g_{ij} x_j$ arise in formal perturbation theories developed by Poincare Liapunov and Malkin and in averaging theories developed by Bogoliubov and Mitropolsky

Advances in Information Processing and Protection Jerzy Pejas, Khalid Saeed, 2007-09-29 The Computer Science is relatively new field which is developing very fast not only because due to the huge interest of scientists and the market request but also because this science has created possibilities for people of investigation and solved many problems that some time ago seemed to be insolvable Such problems had only been described in science fiction novels like underwater journeys of captain Nemo described by Jules Verne in XIX century At present various human dreams are successively becoming reality exactly as the underwater journeys became possible in the XX century The proposed book gives you a view of the progress in such domains of Computer Science as Artificial Intelligence Biometrics Security of Information Technology Computer Information Systems and Industrial Management The works contained in the book describe the newest investigation results of devoted scientists from Europe and Asia The book is written in a hard scientific language It is really valuable and I am sure it will deliver you many scientific benefits Professor Andrzej Piegat Szczecin University of Technology Faculty of Computer Science and Information Systems and University of Szczecin Poland Faculty of Economic Sciences and Management

Natural Biodynamics Vladimir G. Ivancevic, Tijana T. Ivancevic, 2005 This comprehensive volume is a graduate level text in human biodynamics written in the unified categorical language of modern differential geometry and topology Combining mathematics physics and robotics with human physiology this is the first book that describes all levels of human biodynamics from musculo skeletal mechanics to the higher brain functions The book develops and uses a variety of research methods ranging from chaos theory and Haken's synergetics through quantum mechanics to nonlinear control and artificial intelligence to provide the means to understand predict and control the behavior of human like systems in their full neuro musculo skeletal complexity The applications of this unique scientific methodology range from prediction of human neuro musculo skeletal injuries to brain like control of humanoid robots
