Reflexive Cartography Emanuela Casti, 2015-08-13 Reflexive Cartography addresses the adaptation of cartography including its digital forms GIS WebGIS PPGIS to the changing needs of society and outlines the experimental context aimed at mapping a topological space Using rigorous scientific analysis based on statement consistency relevance of the proposals and model accessibility it charts the transition from topographical maps created by state agencies to open mapping produced by citizens Adopting semiotic theory to uncover the complex communicative mechanisms of maps and to investigate their ability to produce their own messages and new perspectives Reflexive Cartography outlines a shift in our way of conceptualizing maps from a plastic metaphor of reality as they are generally considered to solid tools that play the role of agents assisting citizens as they think and plan their own living place and make sense of the current world Applies a range of technologies to theoretical perspectives on mapping to innovatively map the world's geographic diversity Features a multi disciplinary perspective that weaves together geography the geosciences and the social sciences through territorial representation Authored and edited by two of the world's foremost cartographic experts who combine more than 60 years of experience in research and in the classroom Presents more than 60 figures to underscore key concepts

Maps and the Internet M.P. Peterson, International Cartographic Association, 2005-12-17 This book examines a new trend affecting cartography and geographic information science Presenting the work of over 30 authors from 16 different countries the book provides an overview of current research in the new area of Internet Cartography Chapters deal with the growth of this form of map distribution uses in education privacy issues and technical aspects from the point of view of the map provider including Internet protocols such as XML and SVG Many see the Internet as a revolution for cartography Previously tied to

the medium of paper and expensive large format color print technology maps had a limited distribution and use The Internet made it possible to not only distribute maps to a much larger audience but also to incorporate interaction and animation in the display Maps have also become timelier with some maps of traffic and weather being updated every few minutes In addition it is now possible to access maps from servers throughout the world Finally the Internet has made historic maps available for viewing to the public that were previously only available in map libraries with limited access Provides comprehensive coverage of maps and the internet Delivers a global perspective Combines theoretical and practical aspects
