Web Dragons Ian H. Witten, Marco Gori, Teresa Numerico, 2010-07-27 Web Dragons offers a perspective on the world of Web search and the effects of search engines and information availability on the present and future world In the blink of an eye since the turn of the millennium the lives of people who work with information have been utterly transformed Everything we need to know is on the web It s where we learn and play shop and do business keep up with old friends and meet new ones Search engines make it possible for us to find the stuff we need to know Search engines web dragons are the portals through which we access society s treasure trove of information How do they stack up against librarians the gatekeepers over centuries past What role will libraries play in a world whose information is ruled by the web How is the web organized Who controls its contents and how do they do it How do search engines work How can web visibility be exploited by those who want to sell us their wares What s coming tomorrow and can we influence it As we witness the dawn of a new era this book shows readers what it will look like and how it will change their world Whoever you are if you care about information this book will open your eyes and make you blink Presents a critical view of the idea of funneling information access through a small handful of gateways and the notion of a centralized index and the problems that may cause Provides promising approaches for addressing the problems such as the personalization of web services Presented by authorities in the field of digital libraries web history machine learning and web and data mining Find more information at the author s site webdragons.net *A Web of Dragons* Michael Hartmann, 1987 **Dragons** Cory Glaberson, 1986 Mining Massive Data Sets for Security Françoise Fogelman-Soulié, Jakub Piskorski, Ralf Steinberger, 2008-10-15 The real power for security applications will come from the synergy of academic and commercial research focusing on the specific issue of security Special constraints apply to this domain which are not always taken into consideration by academic research but are critical for successful security applications large volumes techniques must be able to handle huge amounts of data and perform on line computation scalability algorithms must have processing times that scale well with ever growing volumes automation the analysis process must be automated so that information extraction can run on its own ease of use everyday citizens should be able to extract and assess the necessary information and robustness systems must be able to cope with data of poor quality missing or erroneous data The NATO Advanced Study Institute ASI on Mining Massive Data Sets for Security held in Italy September 2007 brought together around ninety participants to discuss these issues This publication includes the most important contributions but can of course not entirely reflect the lively interactions which allowed the participants to exchange their views and share their experience The bridge between academic methods and industrial constraints is systematically discussed throughout This volume will thus serve as a reference book for anyone interested in understanding the techniques for handling very large data sets and how to apply them in conjunction for solving security issues **NBS - Web of Dragons** Bob Hartman, 1988-12-28 *Exploring Big Historical Data: The Historian's Macroscopic (Second Edition)*
