Ya. Pavlinov, 2022-06-14 *Species Problems and Beyond* offers a collection of up to date essays discussing from an interdisciplinary perspective the many ramifications of the Species Problem. The authors represent experts in the philosophy of biology in species level evolutionary investigations and in biodiversity studies and conservation. Some of the topics addressed concern the context sensitivity of the term species, species as individuals, processes, natural kinds, or as operative concepts, species delimitation in the age of Big genomic Data and taxonomic inflation and its consequences for conservation strategies. The carefully edited volume will be an invaluable resource for philosophers of biology and evolutionary biologists alike. Olivier Rieppel, Rowe Family Curator of Evolutionary Biology, Negaunee Integrative Research Center, Field Museum, USA.

Species or the Species Problem is a topic in science, in the philosophy of science, and in general philosophy. In fact, it encompasses many aspects of the same problem, and these are dealt with in this volume. Species are often thought of as fundamental units of biological matter to be used in ecology, conservation, classification, and biodiversity. The chapters in this book present opposing views on the current philosophical and conceptual issues of the Species Problem in biology. Divided into four sections: Concepts and Theories, Practice and Methods, Ranks and Trees, and Names and Metaphysics and Epistemologies, the book is authored by biologists, philosophers, and historians, many leaders in their fields. Topics include ontology of species, definitions of both species category and units, species rank, speciation issues, nomenclature, ecology, and species conservation.

Species Problems and Beyond aims to clarify the contemporary issues of the Species Problem. It is ideal for use in upper level seminars and courses in Evolutionary Biology, Philosophy of Science, Philosophy of Biology, Systematics, and Taxonomy, and Phylogenetics, Cladistics, and for any scholar in these fields.

Scheiner,David P. Mindell,2020-04-03 Darwin s nineteenth century writings laid the foundations for modern studies of evolution and theoretical developments in the mid twentieth century fostered the Modern Synthesis Since that time a great deal of new biological knowledge has been generated including details of the

genetic code lateral gene transfer and developmental constraints Our improved understanding of these and many other phenomena have been working their way into evolutionary theory changing it and improving its correspondence with evolution in nature And while the study of evolution is thriving both as a basic science to understand the world and in its applications in agriculture medicine and public health the broad scope of evolution operating across genes whole organisms clades and ecosystems presents a significant challenge for researchers seeking to integrate abundant new data and content into a general theory of evolution This book gives us that framework and synthesis for the twenty first century The Theory of Evolution presents a series of chapters by experts seeking this integration by addressing the current state of affairs across numerous fields within evolutionary biology ranging from biogeography to multilevel selection speciation and macroevolutionary theory By presenting current syntheses of evolution s theoretical foundations and their growth in light of new datasets and analyses this collection will enhance future research and understanding

Making Sense of Evolution
Massimo Pigliucci,Jonathan Kaplan,2010-02-15 Making Sense of Evolution explores contemporary evolutionary biology focusing on the elements of theories selection adaptation and species that are complex and open to multiple possible interpretations many of which are incompatible with one another and with other accepted practices in the discipline Particular experimental methods for example may demand one understanding of selection while the application of the same concept to another area of evolutionary biology could necessitate a very different definition Spotlighting these conceptual difficulties and presenting alternate theoretical interpretations that alleviate this incompatibility Massimo Pigliucci and Jonathan Kaplan intertwine scientific and philosophical analysis to produce a coherent picture of evolutionary biology Innovative and controversial Making Sense of Evolution encourages further development of the Modern Synthesis and outlines what might be necessary for the continued refinement of this evolving field

The Endangered Species Problem Daniel R. Faust, 2021-07-15 In 2018 three species of birds went extinct. These species are gone forever and many more species of plants and animals are in danger of going extinct every year. Scientists estimate that almost half of the species on Earth could be extinct by 2050. This volume looks at the issue of endangered species and the impact that human activity has on the many plants and animals that share our planet. Colorful photographs, primary sources, and helpful graphics illustrate the conservation efforts made by scientists and lawmakers around the world. This book will encourage your young readers to take an active role in solving this problem.
