Spectra for the Identification of Additives in Food Packaging Ben van Lierop, Laurence Castle, Alexandre Feigenbaum, Achim Boenke, 2012-12-06 This new book on additives used in plastics for food contact can be seen as a companion to the 1993 publication *Spectra for the Identification of Monomers in Food Packaging* 1 2 That earlier book presented information on monomeric substances listed in Directive 90/1128 EEC 3 which restricts the range of monomers and other starting substances that can be used for the production of plastics materials and articles intended for food contact applications As a logical supplement to the collection of monomers and other starting substances the preparation of a reference collection and a Handbook of analytical data of additives was undertaken with funding from The European Commission under the Standards Measurements and Testing programme We then give a collection of spectra for the identification of 100 of the most important additives used in plastics packaging and coatings Infra red FT IR and mass spectra MS are presented as in the monomers book but we have extended the scope to include proton nuclear magnetic resonance ¹H NMR spectra and gas chromatographic GC data Legal Framework The Commission of the European Communities provides in Synoptic Document N 7 4 a provisional list of additives used for the production of food contact plastics This Synoptic Document anticipates a Directive on additives for food contact plastics One hundred of the most important additives were selected from this provisional list after extensive consultation with researchers in the field and with representatives from European industry Food Contact Additives Panel FCA sector group of the European Chemical Industry Council CEFIC

Bart, 2005-04-08 This industrially relevant resource covers all established and emerging analytical methods for the deformation of polymeric materials with emphasis on the non polymeric components Each technique is evaluated on its technical and industrial merits Emphasis is on understanding principles and characteristics and industrial applicability Extensively illustrated throughout with over 200 figures 400 tables and 3 000 references

Additive Migration from Plastics Into Foods Thomas Roy Crompton, 2007 Plastics are now being used on a large scale for the packaging of fatty and aqueous foodstuffs and beverages both alcoholic and non alcoholic Thus it is likely that some transfer of polymer additives will occur adventitious impurities such as monomers oligomers catalyst remnants and residual polymerisation solvents and low molecular weight polymer fractions from the plastic into the packaged material with the consequent risk of a toxic hazard to the consumer This book covers all aspects of the migration of additives into food and gives detailed information on the analytical determination of the additives in various plastics This book will be of interest to those engaged in the implementation of packaging legislation including management analytical chemists and the manufacturers of foods beverages pharmaceuticals and cosmetics and also scientific and toxicologists in the packaging industry
