Made at the Coast and Geodetic Survey Magnetic Observatory at Vieques, Porto Rico U.S. Coast and Geodetic Survey,1923 [Handbook of Experimental Economics Results](#) Charles R. Plott,Vernon L. Smith,2008-08-21 Experimental methods in economics respond to circumstances that are not completely dictated by accepted theory or outstanding problems While the field of economics makes sharp distinctions and produces precise theory the work of experimental economics sometimes appear blurred and may produce results that vary from strong support to little or partial support of the relevant theory At a recent conference a question was asked about where experimental methods might be more useful than field methods Although many cannot be answered by experimental methods there are questions that can only be answered by experiments Much of the progress of experimental methods involves the posing of old or new questions in a way that experimental methods can be applied The title of the book reflects the spirit of adventure that experimentalists share and focuses on experiments in general rather than forcing an organization into traditional categories that do not fit The emphasis reflects the fact that the results do not necessarily demonstrate a consistent theme but instead reflect bits and pieces of progress as opportunities to pose questions become recognized This book is a result of an invitation sent from the editors to a broad range of experimenters asking them to write brief notes describing specific experimental results The challenge was to produce pictures and tables that were self contained so the reader could understand quickly the essential nature of the experiments and the results **Investigation of "preselected Winners" Sweepstakes Promotions** United States.
