Flying Aircraft Carriers of the USAF: Wing Tip Coupling Brian Lockett, 2009-07-01 During and after World War II aircraft designers were faced with the problem of increasing the range of strategic bombers Dr Richard Vogt a German immigrant to the United States proposed that floating wing panels carrying fuel tanks could be attached to the wing tips of an airplane with hinges to extend its range The floating wing panels would support their own weight without increasing the load on the airplane s wings The Air Force initiated a project to simulate floating wing panels with a piloted light plane that coupled to a larger airplane in flight Soon the scope of the project expanded to explore the possibility of towing fighters coupled to the wing tips of bombers

Pressure-Actuated Cellular Structures for Adaptive Wingtips Patrick Meyer, 2025-08-01 Aviation has a substantial environmental impact necessitating a shift towards more sustainability High aspect ratio HAR wings increase the efficiency of future transport aircraft by significantly reducing induced drag and consequently fuel consumption However the extended wingspan of HAR wings is accompanied by challenges including ground operations structural loads and aircraft control Folding wingtips FWTs address these challenges by incorporating a hinge at the outboard wing section enabling the wingtip to fold during ground operations or specific flight scenarios Wingtip actuators that allow active adjustment of the wingtip s cant angle and hinge stiffness can expand the potential operating modes of FWTs beyond the current state of the art Possible operating modes include extended load alleviation mission adaptability advanced flight control and active flutter suppression While most research on FWTs focuses on flight dynamics and aeroelasticity little attention has been given to the structural design of wingtip actuators This book introduces an actuator concept that transforms FWTs into multifunctional wingtip devices referred to as actuated adaptive wingtips The concept of actuated adaptive wingtips is based on a compliant morphing structure that adapts its mechanical properties by varying the fluid pressure in structure integrated chambers Technical Report Great Britain.
