1998 Winter Simulation Conference Proceedings. Simulation Inthe 21. Century J. S. Carson, M. S. (eds.). Manivannan, D. J. Medeiros, E. F. Watson, 1998 Winter Simulation Conference (WSC '98), 1998 **Proceedings of the 1998 Winter Simulation Conference** D. J. Medeiros, 1998 1998 Winter Simulation Conference Proceedings Winter Simulation Conference (30, 1998, Washington, DC), 1998 1998 Winter Simulation Conference. Proceedings (Cat. No.98CH36274), 1998 *Modeling for Decision Support in Network-Based Services* Daniel Dolk, Janusz Granat, 2012-01-16 This book originated from several recent workshops and related activities conducted by the IFIP Working Group 7.6 on Optimization Based Computer Aided Modeling and Design. This group has been active for 20 years with the stated objective of developing high performance computer aided systems to support modeling, decision analysis, optimization, and multi-criteria decision making. Recently the group has turned its attention to the application of modeling and optimization to service science management and engineering. SSME is still a young research field searching for its theoretical underpinnings and one which offers many opportunities for analytical modeling to not only advance the understanding but also to help form the foundation of a new discipline. This book is the result of the group's introductory foray into the application of quantitative modeling to the nascent field of service science with special emphasis on the network aspects of services. The 11 papers presented are grouped into sections on Network Science, Computational and Analytical Modeling, and Knowledge Science. They showcase the value of modeling in a new and timely context and provide many seeds for further exciting research. *Engineering Asset Management 2011* Jay Lee, Jun Ni, Jagnathan Sarangapani, Joseph Mathew, 2013-07-30 This text represents state of the art trends and developments in the emerging field of engineering asset management as presented at the Sixth World Congress on Engineering Asset Management WCEAM held in Cincinnati, OH, USA from October 3-5, 2011. The Proceedings of the WCEAM 2011 is an excellent reference for practitioners, researchers, and students in the multidisciplinary field of asset management covering topics such as Asset condition monitoring and intelligent maintenance, Asset data warehousing, data mining, and fusion, Asset performance and level of service models, Design and lifecycle integrity of physical assets, Deterioration and preservation models for assets, Education and training in asset management, Engineering standards in asset management, Fault diagnosis and prognostics, Financial analysis methods for physical assets, Human dimensions in integrated asset management, Information quality management, Information systems and knowledge management, Intelligent maintenance, Intelligent sensors and devices, Maintenance strategies in asset management, Optimization decisions in asset management, Prognostics, Risk management in asset management, Strategic asset management, and Sustainability in asset management. Modern Business Process Automation Arthur H. M. ter Hofstede, Wil M. P. van der Aalst, Michael Adams, Nick Russell, 2009-11-18 The field of Business Process Management (BPM) is marred by a seemingly endless sequence of proposed industry standards. Contrary to other fields e.g. civil or electronic

engineering these standards are not the result of a widely supported consolidation of well understood and well established concepts and practices. In the BPM domain it is frequently the case that BPM vendors opportunistically become involved in the creation of proposed standards to exert or maintain their influence and interests in the field. Despite the initial fervor associated with such standardization activities it is no less frequent that vendors either choose to drop their support for standards that they earlier championed on an opportunistic basis or elect only to partially support them in their commercial offerings. Moreover, the results of the standardization processes themselves are a concern. BPM standards tend to deal with complex concepts yet they are never properly defined and all too often not informed by established research. The result is a plethora of languages and tools with no consensus on concepts and their implementation. They also fail to provide clear direction in the way in which BPM standards should evolve. One can also observe a dichotomy between the business side of BPM and its technical side. While it is clear that the application of BPM will fail if not placed in a proper business context it is equally clear that its application will go nowhere if it remains merely a motivational exercise with schemas of business processes hanging on the wall gathering dust.
