Understanding Options for Agricultural Production G.Y. Tsuji, G. Hoogenboom, P.K. Thornton, 1998-01-31 The first premise of this book is that farmers need access to options for improving their situation In agricultural terms these options might be management alternatives or different crops to grow that can stabilize or increase household income that reduce soil degradation and dependence on off farm inputs or that exploit local market opportunities Farmers need a facilitating environment in which affordable credit is available if needed in which policies are conducive to judicious management of natural resources and in which costs and prices of production are stable Another key ingredient of this facilitating environment is information an understanding of which options are viable how these operate at the farm level and what their impact may be on the things that farmers perceive as being important The second premise is that systems analysis and simulation have an important role to play in fostering this understanding of options traditional field experimentation being time consuming and costly This book summarizes the activities of the International Benchmark Sites Network for Agrotechnology Transfer IBSNAT project an international initiative funded by the United States Agency for International Development USAID IBSNAT was an attempt to demonstrate the effectiveness of understanding options through systems analysis and simulation for the ultimate benefit of farm households in the tropics and subtropics The idea for the book was first suggested at one of the last IBSNAT group meetings held at the University of Hawaii in 1993

Precision Agriculture for Sustainability and Environmental Protection Margaret Oliver, Thomas Bishop, Ben Marchant, 2013-11-20 Precision agriculture PA involves the application of technologies and agronomic principles to manage spatial and temporal variation associated with all aspects of agricultural production in order to improve crop performance and environmental quality The focus of this book is to introduce a non specialist audience to the the role of PA in food security environmental protection and sustainable use of natural resources as well as its economic benefits The technologies covered include yield monitors and remote sensing and the key agronomic principles addressed are the optimal delivery of fertilizers water and pesticides to crops only when and where these are required As a result it is

shown that both food production and resource efficiency can be maximized without waste or damage to the environment such as can occur from excessive fertilizer or pesticide applications The authors of necessity describe some technicalities about PA but the overall aim is to introduce readers who are unfamiliar with PA to this very broad subject and to demonstrate the potential impact of PA on the environment and economy Chapter 3 of this book is freely available as a downloadable Open Access PDF at <http://www.taylorfrancis.com> under a Creative Commons Attribution Non Commercial No Derivatives CC BY NC ND 3 0 license
