Weather First Start Science:

Encyclopedia of Science and Technology Communication Susanna Hornig Priest, 2010-07-14 The explosion of scientific information is exacerbating the information gap between richer poorer educated less educated publics The proliferation of media technology and the popularity of the Internet help some keep up with these developments but also make it more likely others fall further behind This is taking place in a globalizing economy and society that further complicates the division between information haves and have nots and compounds the challenge of communicating about emerging science and technology to increasingly diverse audiences Journalism about science and technology must fill this gap yet journalists and journalism students themselves struggle to keep abreast of contemporary scientific developments Scientist aided by public relations and public information professionals must get their stories out not only to other scientists but also to broader public audiences Funding agencies increasingly expect their grantees to engage in outreach and education and such activity can be seen as both a survival strategy and an ethical imperative for taxpayer supported university based research Science communication often in new forms must expand to meet all these needs Providing a comprehensive introduction to students professionals and scholars in this area is a unique challenge because practitioners in these fields must grasp both the principles of science and the principles of science communication while understanding the social contexts of each For this reason science journalism and science communication are often addressed only in advanced undergraduate or graduate specialty courses rather than covered exhaustively in lower division courses Even so those entering the field rarely will have a comprehensive background in both science and communication studies This circumstance underscores the importance of compiling useful reference materials The Encyclopedia of Science and Technology Communication presents resources and strategies for science communicators including theoretical material and background on recent controversies and key institutional actors and sources Science communicators need to understand more than how to interpret scientific facts and conclusions they need to understand basic elements of the politics sociology and philosophy of science as well as relevant media and communication theory principles of risk communication new trends and how to evaluate the effectiveness of science communication programmes to mention just a few of the major challenges This work will help to develop and enhance such understanding as it addresses these challenges and more Topics covered include advocacy policy and research organizations environmental and health communication philosophy of science media theory and science communication informal science education science journalism as a profession risk communication theory public understanding of science pseudo science in the news special problems in reporting science and technology science communication ethics

Problems, Philosophy and Politics of Climate Science Guido Visconti, 2017-09-17 This book is a critical appraisal of the status of the so called Climate Sciences CS These are contributed by many other basic sciences like physics geology chemistry and as such employ theoretical and experimental methods In the last few decades most of the CS

have been identified with the global warming problem and numerical models have been used as the main tool for their investigations. The produced predictions can only be partially tested against experimental data and may represent one of the reasons CS are drifting away from the route of the scientific method. On the other hand, the study of climate faces many other interesting and mostly unsolved problems: think about ice ages whose solution could clarify how the climatic system works. As for the global warming, while its existence is largely proved scientifically, it can be solved only with a large experimental effort carried out for a few decades. Problems can arise when not proved hypotheses are adopted as the basis for public policy without the recognition that they may be on shaky ground. The strong interactions of the Global Warming (GW) with the society create another huge problem of political nature for the CS. The book argues that the knowledge gained so far on the specific GW problem is enough for the relevant political decisions to be taken and that Climate Science should resume the study of the climate system with appropriate means and methods. The book introduces the most relevant concepts needed for the discussion in the text or in appropriate appendices and it is directed to the general public with upper undergraduate background. Each chapter closes with a debate between a climate scientist and a humanist to reflect the discussions between climate science and philosophy or climate scientists and society.

Real Scientists, Real Faith R J Berry, 2012-11-20. The science faith debate rages on. Yet many leading scientists have an active Christian faith. Here 17 scientists, all esteemed by their peers, tackle two questions: What difference their faith makes to their scientific practice and what difference their science makes to their understanding of their faith. Contributors include Francis Collins, Director Human Genome Project; Joan Centrella, Chief of the Gravitational Astrophysics Laboratory, NASA; Bob White, Professor of Geophysics, University of Cambridge; Alister McGrath, Professor of Theology, King's College London; and molecular biologist Wilson Poon, Professor of Physics, University of Edinburgh.

The Routledge Companion to Environmental Ethics Benjamin Hale, Andrew Light, Lydia Lawhon, 2022-07-29. Written for a wide range of readers in environmental science, philosophy, and policy-oriented programs, *The Routledge Companion to Environmental Ethics* is a landmark comprehensive reference work in this interdisciplinary field. Not merely a review of theoretical approaches to the ethics of the environment, the Companion focuses on specific environmental problems and other concrete issues. Its 65 chapters, all appearing in print here for the first time, have been organized into the following eleven parts: I Animals, II Land, III Water, IV Climate, V Energy and Extraction, VI Cities, VII Agriculture, VIII Environmental Transformation, IX Policy Frameworks and Response Measures, X Regulatory Tools, XI Advocacy and Activism. The volume not only explains the nuances of important core philosophical positions but also cuts new pathways for the integration of important ethical and policy issues into environmental philosophy. It will be of immense help to undergraduate students and other readers coming up to the field for the first time but also serve as a valuable resource for more advanced students as well as researchers who need a trusted resource that also offers fresh policy-centered approaches.
