Problems and Prospects in Long and Medium Range Weather Forecasting D.M. Burridge,E. Källén,2012-12-06 Forecasting the weather for the long and medium range is a difficult and scientifically challenging problem Since the first operational weather prediction by numerical methods was carried out on the BESK computer in Stockholm Sweden 1954 there has been an ever accelerating development in computer technology Hand in hand has followed a tremendous increase in the complexity of the atmospheric models used for weather prediction The ability of these models to predict future states of the atmosphere has also increased rapidly both due to model development and due to more accurate and plentiful observations of the atmosphere to define the initial state for model integrations It may however be argued on theoretical grounds that even if we have an almost perfect model with almost perfect initial data we will never be able to make an accurate weather prediction more than a few weeks ahead This is due to the inherent instability of the atmosphere and work in this field was pioneered by E Lorenz It is generally referred to as atmospheric predict ability and in the opening chapter of this book Professor Lorenz gives us an overview of the problem of atmospheric predictability The contributions to this book were originally presented at the 1981 ECMWF Seminar ECMWF European Centre for Medium Range Weather Forecasts which was held at ECMWF in Reading England in September 1981 [Journal of the Association of Chinese & American Engineers](#) Association of Chinese and American Engineers, Peking,1921 **The Meteorological Magazine** ,1960
