## **Solving Higherorder Equations From Logic To Programming:**

Solving Higher-Order Equations Christian Prehofer,2012-12-06 This monograph develops techniques for equational reasoning in higher order logic Due to its expressiveness higher order logic is used for specification and verification of hardware software and mathematics In these applications higher order logic provides the necessary level of abstraction for concise and natural formulations The main assets of higher order logic are quantification over functions or predicates and its abstraction mechanism These allow one to represent quantification in formulas and other variable binding constructs In this book we focus on equational logic as a fundamental and natural concept in computer science and mathematics We present calculi for equational reasoning modulo higher order equations presented as rewrite rules This is followed by a systematic development from general equational reasoning towards effective calculi for declarative programming in higher order logic and A calculus This aims at integrating and generalizing declarative programming models such as functional and logic programming In these two prominent declarative computation models we can view a program as a logical theory and a computation as a deduction

 Treinen,2003-08-06 Constraints provide a declarative way of representing infinite sets of data They are well suited for  
 combining different logical or programming paradigms as has been known for constraint logic programming since the 1980s  
 and more recently for functional programming The use of constraints in automated deduction is more recent and has proved  
 to be very successful moving the control from the meta level to the constraints which are now first class objects This  
 monograph like book presents six thoroughly reviewed and revised lectures given by leading researchers at the summer  
 school organized by the ESPRIT CCL Working Group in Gif sur Yvette France in September 1999 The book offers coherently  
 written chapters on constraints and constraint solving constraint solving on terms combining constraint solving constraints  
 and theorem proving functional and constraint logic programming and building industrial applications **Foundations of
