Topics In Multidimensional Linear Systems Theory:

Topics in Multidimensional Linear Systems Theory Eva Zerz, 2000-08-16 The past few decades have witnessed an increasing interest in the field of multidimensional systems theory This is concerned with systems whose trajectories depend not on one single variable usually interpreted as time or frequency but on several independent variables such as the coordinates of an image The behavioural approach introduced by J C Willems provides a particularly suitable framework for developing a linear systems theory in several variables The book deals with the classical concepts of autonomy controllability observability and stabilizability All the tests and criteria given are constructive in the sense that algorithmic versions may be implemented in modern computer algebra systems using Gröbner basis techniques There is a close connection between multidimensional systems theory and robust control of one dimensional systems with several uncertain parameters The central link consists in the basic tool of linear fractional transformations The book concludes with examples from the theory of electrical networks

Interpolation and Realization Theory with Applications to Control Theory Vladimir Bolotnikov, Sanne ter Horst, André C.M. Ran, Victor Vinnikov, 2019-04-08 This volume is devoted to Joseph A. Ball's contributions to operator theory and its applications and in celebration of his seventieth birthday Joe Ball's career spans over four and a half decades starting with his work on model theory and related topics for non contractions and operators on multiply connected domains Later on more applied operator theory themes appeared in his work involving factorization and interpolation for operator valued functions with extensive applications in system and control theory He has

worked on nonlinear control time varying systems and more recently on multidimensional systems and noncommutative H theory on the unit ball and polydisk and more general domains and these are only the main themes in his vast oeuvre Fourteen research papers constitute the core of this volume written by mathematicians who have collaborated with Joe or have been influenced by his vast mathematical work A curriculum vitae a publicationslist and a list of Joe Ball s PhD students are included in this volume as well as personal reminiscences by colleagues and friends Contributions by Yu M Arlinskii S Hassi M Augat J W Helton I Klep S McCullough S Balasubramanian U Wijesooriya N Cohen Q Fang S Gorai J Sarkar G J Groenewald S ter Horst J Jaftha A C M Ran M A Kaashoek F van Schagen A Kheifets Z A Lykova N J Young A E Ajibo R T W Martin A Ramanantoanina M J Y Ou H J Woerdeman A van der Schaft A Tannenbaum T T Georgiou J O Deasy and L Norton
