## Topics In Ring Theory:

*Topics in Ring Theory* Israel Nathan Herstein, 1969      **Topics in Commutative Ring Theory** John J. Watkins, 2009-02-09 *Topics in Commutative Ring Theory* is a textbook for advanced undergraduate students as well as graduate students and mathematicians seeking an accessible introduction to this fascinating area of abstract algebra. Commutative ring theory arose more than a century ago to address questions in geometry and number theory. A commutative ring is a set such as the integers, complex numbers, or polynomials with real coefficients with two operations: addition and multiplication. Starting from this simple definition, John Watkins guides readers from basic concepts to Noetherian rings, one of the most important classes of commutative rings, and beyond to the frontiers of current research in the field. Each chapter includes problems that encourage active reading, routine exercises, as well as problems that build technical skills and reinforce new concepts. The final chapter is devoted to new computational techniques now available through computers. Careful to avoid intimidating theorems and proofs whenever possible, Watkins emphasizes the historical roots of the subject, like the role of commutative rings in Fermat's last theorem. He leads readers into unexpected territory with discussions on rings of continuous functions and the set-theoretic foundations of mathematics. Written by an award-winning teacher, this is the first introductory textbook to require no prior knowledge of ring theory to get started. Refreshingly informal without ever sacrificing mathematical rigor, *Topics in Commutative Ring Theory* is an ideal resource for anyone seeking entry into this stimulating field of study.

**Advances in Ring Theory and Applications** Shakir Ali, Mohammad Ashraf, Vincenzo De Filippis, Nadeem ur Rehman, 2024-04-28. The book intends to be a collection of research papers on algebra and related topics, most of which were presented at the international Workshop on Associative Rings and Algebras with additional structures WARA22. The purpose of the workshop WARA22 was to present the current state of the art both in the Theory of Lie structures of associative rings and algebras and in the Theory of functional identities in rings. The

conference has emerged as a powerful forum offering researchers the opportunity to meet get to know each other and discuss advances in ring theory inspiring further research directions The main topics covered refer to rings with involution Lie and Jordan structures rings and algebras arising under various constructions modules bimodules and ideals in associative algebras behavior of derivations automorphisms and other kinds of additive maps in rings and algebras All the contributing authors are leading international academicians and researchers in their respective fields The papers cover a wide range of topics in ring theory group theory matrix algebra and graph theory The book will serve both the specialist looking for the latest results and the novice looking for the appropriate references to access the study and understanding of the results presented here

*Perspectives in Ring Theory* Freddy Van Oystaeyen, Lieven le Bruyn, 2012-12-06 This proceedings is composed of the papers resulting from the NATO work shop Perspectives in Ring Theory and the work shop Geometry and Invariant Theory of Representations of Quivers Three reports on problem sessions have been induced in the part corresponding to the work shop where they belonged One more report on a problem session the lost problem session will be published elsewhere eventually

vii Acknowledgement The meeting became possible by the financial support of the Scientific Affairs Division of NATO The people at this division have been very helpful in the organization of the meeting in particular we commemorate Dr Mario di Lullo who died unexpectedly last year but who has been very helpful with the organization of earlier meetings in Ring Theory For additional financial support we thank the national foundation for scientific research NFWO the rector of the University of Antwerp UIA and the Belgian Ministry of Education We also gladly acknowledge support from the Belgian Friends of the Hebrew University and the chairman Prof P Van Remoortere who honored Prof S Amitsur for his continuous contributions to the mathematical activities at the University of Antwerp I thank the authors who contributed their papers to this proceedings and the lecturers for their undisposable contributions towards the success of the work shop Finally I thank Danielle for allowing me to spoil another holiday period in favor of a congress

Eldridge, 1977 *Two topics in commutative ring theory* Andrew J. Duncan, 1988 **Ring Theory; Proceedings** Robert Gordon, 1972 **Introduction to Abstract Algebra** Elbert Walker, 1987 Ring Theory F. Van Oystaeyen, 1978 **International Symposium on Ring Theory** Gary F. Birkenmeier, Jae K. Park, Young S. Park, 2012-12-06 This volume is the Proceedings of the Third Korea China Japan International Symposium on Ring Theory held jointly with the Second Korea Japan Joint Ring Theory Seminar which took place at the historical resort area of Korea Kyongju June 28 July 3 1999 It also includes articles by some invited mathematicians who were unable to attend the conference Over 90

mathematicians from 12 countries attended this conference. The conference is held every 4 years on a rotating basis. The first conference was held in 1991 at Guilin, China. In 1995, the second conference took place in Okayama, Japan. At the second conference, it was decided to include Korea, who hosted this conference in 1999. During the past century, Ring Theory has diversified into many subareas. This is reflected in these articles from over 25 well-known mathematicians covering a broad range of topics including Classical Ring Theory, Module Theory, Representation Theory, and the theory of Hopf Algebras. Among these peer-reviewed papers are invited survey articles as well as research articles. The survey articles provide an overview of various areas for researchers looking for a new or related field to investigate, while the research articles give the flavor of current research. We feel that the variety of related topics will stimulate interaction between researchers. Moreover, the Open Problems section provides guidance for future research. This book should prove attractive to a wide audience of algebraists.

Gary F. Birkenmeier, Lafayette, U.S.A.     Topics in Group Rings Sudarshan K. Sehgal, 1978. The group ring  $KG$  of the group  $G$  over a commutative unital ring  $K$  comprises an attractive object of study. This is one of the few algebraic structures that allow for explicit computations. Several easily formulated questions are associated with this topic. Many interesting results have been obtained in this area by using deep results and techniques from group theory, ring theory, and number theory. Most of the results presented and techniques used have a number-theoretic flavor. Aimed at advanced graduate students and research mathematicians in algebra.
