

Basic Photoreceptor

The earliest eyes were simple cells that could only detect the intensity and direction of light. When one of the many chemical steps of eye failed to occur,

Direction of increasing complexity and improved vision, which is closely associated with evolution.

*Some species evolved specialized eyes which are not improved here.

The Evolution of VISION

All eyes, despite their wonderful variety across lifeforms, come from a history of shared genes. Studying these genes has uncovered a road map to understanding how eye complexity has changed throughout history.

Light in the environment was processed in order to see. Light energy has **various colors** in the eye, which are converted into an **electrical signal** and sent to the brain.

- Pigment collection
- Lens collection
- Sensation
- Vision

The evolution of compound eyes is a bit more complicated. They do not necessarily display increasing visual acuity, since their structure and color are different than conventional environmental detectors.
