Steiner Trees In Industries:

Steiner Trees in Industry Xiuzhen Cheng, Ding-Zhu Du, 2013-12-01 This book is a collection of articles studying various Steiner tree problems with applications in industries such as the design of electronic circuits computer networking telecommunication and perfect phylogeny The Steiner tree problem was initiated in the Euclidean plane Given a set of points in the Euclidean plane the shortest network interconnecting the points in the set is called the Steiner minimum tree The Steiner minimum tree may contain some vertices which are not the given points Those vertices are called Steiner points while the given points are called terminals The shortest network for three terminals was first studied by Fermat 1601-1665 Fermat proposed the problem of finding a point to minimize the total distance from it to three terminals in the Euclidean plane The direct generalization is to find a point to minimize the total distance from it to n terminals which is still called the Fermat problem today The Steiner minimum tree problem is an indirect generalization Schreiber in 1986 found that this generalization i.e. the Steiner minimum tree was first proposed by Gauss

Frontiers in Nature-Inspired Industrial Optimization Mahdi Khosravy, Neeraj Gupta, Nilesh Patel, 2021-08-06 The book provides a collection of recent applications of nature inspired optimization in industrial fields Different optimization techniques have been deployed and different problems have been effectively analyzed The valuable contributions from researchers focus on three ultimate goals i) improving the accuracy of these techniques ii) achieving higher speed and lower computational complexity and iii) working on their proposed applications The book is helpful for active researchers and practitioners in the field

Handbook of Combinatorial Optimization Ding-Zhu Du, Panos M. Pardalos, 2006-08-18 Combinatorial or discrete optimization is one of the most active fields in the interface of operations research computer science and applied mathematics Combinatorial optimization problems arise in various applications including communications network design VLSI design machine vision a line crew scheduling corporate planning computer aided design and manufacturing database query design cellular telephone frequency assignment constraint directed reasoning and computational biology Furthermore combinatorial optimization problems occur in many diverse areas such as linear and integer programming graph theory artificial intelligence and number theory All these problems when formulated mathematically as the minimization or maximization of a certain function defined on some domain have a commonality of discreteness Historically combinatorial optimization starts with linear programming Linear programming has an entire range of important applications including production planning and distribution personnel assignment finance allocation of economic resources circuit simulation and control systems Leonid Kantorovich and Tjalling Koopmans received the Nobel Prize 1975 for their work on the optimal allocation of resources Two important discoveries the ellipsoid method 1979 and interior point approaches 1984 both provide polynomial time algorithms for linear programming These algorithms have had a profound effect in combinatorial optimization Many polynomial time solvable combinatorial optimization problems are special cases of linear programming e.g. matching and maximum flow In addition linear

programming relaxations are often the basis for many approximation algorithms for solving NP hard problems e.g dual heuristics

Computational Mathematics Driven by Industrial Problems R. Burkard, P. Deuffhard, A. Jameson, J.-L. Lions, G. Strang, 2007-05-06 These lecture notes by very authoritative scientists survey recent advances of mathematics driven by industrial application showing not only how mathematics is applied to industry but also how mathematics has drawn benefit from interaction with real world problems The famous David Report underlines that innovative high technology depends crucially for its development on innovation in mathematics The speakers include three recent presidents of ECMI one of ECCOMAS in Europe and the president of SIAM
