**Stellar Atmospheres** Lucio Crivellari,Ivan Hubeny,David G. Hummer,1991      **Stellar Atmospheres: Beyond Classical Models** L. Crivellari,Ivan Hubeny,D. Hummer,2012-12-06 The theory of stellar atmospheres is one of the most important branches of modern astrophysics It is first of all a major tool for understanding all aspects of stars As the physical properties of their outer layers can now be found with high precision firm conclusions can be drawn about the internal structure and evolution of stars Moreover improvements in our knowledge of the chemical composition of stars is shedding new light on the chemical evolution of galaxies and of the Universe as a whole Because the outer layers of stars are among the best understood astrophysical objects the theory of stellar atmospheres plays an important role in the study of many other types of objects These include planetary nebulae H II regions interstellar matter and objects of interest in high energy astrophysics such as accretion disks close binaries dwarf novae cataclysmic variables quasars active galactic nuclei pulsar magnetospheres and Seyfert galaxies Finally as stars provide a laboratory in which plasmas can be studied under more extreme conditions than on earth the study of stellar atmospheres has strong connections with modern physics Astronomical observations provided a vital stimulus in the early stages of quantum theory and atomic physics even today topics such as low temperature dielectronic recombination develop hand in hand with the interpretation of stellar and nebular spectra Early work on MHD was similarly motivated Many such connections remain to be explored      **Literature 1991, Part 2**

Astronomisches Rechen-Institut,2013-06-29 Astronomy and Astrophysics Abstracts appearing twice a year has become one of the fundamental publications in the fields of astronomy astrophysics andneighbouring sciences It is the most important English language abstracting journal in the mentioned branches The abstrats are classified under more than a hundred subject categories thus permitting a quick survey of the whole extended material The AAA is a valuable and important publication for all students and scientists working in the fields of astronomy and related sciences As such it represents a necessary ingredient of any astronomical library all over the world      Modelling of Stellar Atmospheres International Astronomical Union. The Atmospheres of Early-Type Stars Ulrich Heber,1992-04-08 These workshop proceedings aim to provide a broad overview of recent developments in the study of hot stars both from the observational and the theoretical point of view Included are first results from the Hubble Space Telescope and ROSAT the effects of non radial pulsations mass loss magnetic fields and diffusion as well as modern theoretical methods to treat radiative transfer and compute model atmospheres Many new results are described including the discovery of a B star in the halo of M31 Together the reviews provide a general overview of hot star spectroscopy suitable for preparing advanced lecture courses and as an introductory text for graduate students      **Symposium** International Astronomical Union,1996      **Bulletin of the Transilvania**

**Astrophysical Turbulence and Convection** J. Robert Buchler, Henry E. Kandrup,2000 Turbulence and convection are phenomena the existence of which has haunted astrophysicists because they pose such extremely difficult problems The papers in this volume are taken from a conference held in February 1999 which brought together representatives of four different viewpoints the computational physicist s numerical three dimensional large eddy simulations theorists who wish to simplify the equations into approximate but useful one dimensional recipes astrophysicists who see turbulence and convection as a subroutine and experimentalists who provide insights into what really happens at molecular levels in space and keep everyone else honest      *GONG '94* R.
