Techniques For Image Processing And Classification In Remote Sensing:

Techniques for Image Processing and Classifications in Remote Sensing Robert A. Schowengerdt, 2012-12-02
Techniques for Image Processing and Classifications in Remote Sensing provides an introduction to the fundamentals of computer image processing and classification commonly called pattern recognition in other applications. The book begins with a discussion of digital scanners and imagery and two key mathematical concepts for image processing and classification: spatial filtering and statistical pattern recognition. This is followed by separate chapters on image processing and classification techniques that are widely used in the remote sensing community. The emphasis throughout is on techniques that assist in the analysis of images, not particular applications of these techniques. The book also has four appendixes featuring a bibliography, an introduction to computer binary data representation and image data formats, a discussion of interactive image processing, and a selection of exam questions from the Image Processing Laboratory course at the University of Arizona. This book is intended for use as either a primary source in an introductory image processing course or as a supplementary text in an intermediate level remote sensing course. The academic level addressed is upper division undergraduate or beginning graduate, and familiarity with calculus and basic vector and matrix concepts is assumed.

Techniques of Image Processing and Classification in Remote Sensing Robert A. Schowengerdt, 1983 *Image Processing and GIS for Remote Sensing* Jian Guo Liu, Philippa J. Mason, 2016-03-21
Following the successful publication of the 1st edition in 2009, the 2nd edition maintains its aim to provide an application-driven package of essential techniques in image processing and GIS, together with case studies for demonstration and guidance in remote sensing applications. The book therefore has a 3-in-1 structure which pinpoints the intersection between these three individual disciplines and successfully draws them together in a balanced and comprehensive manner. The book conveys in depth knowledge of image processing and GIS techniques in an accessible and comprehensive manner with clear explanations and conceptual illustrations used throughout to enhance student learning. The understanding of key concepts is always emphasized with minimal assumption of prior mathematical experience. The book is heavily based on the authors' own research. Many of the author-designed image processing techniques are popular around the world. For instance, the SFIM technique has long been adopted by ASTRIUM for mass production of their standard Pan-sharpen imagery data. The new edition also includes a completely new chapter on subpixel technology and new case studies based on their recent research. Remote Sensing Robert A. Schowengerdt, 2012-12-02
This book is a completely updated, greatly expanded version of the previously successful volume by the author. The Second Edition includes new results and data and discusses a unified framework and rationale for designing and evaluating image processing algorithms. Written from the viewpoint that image processing supports remote sensing science, this book describes physical models for remote sensing phenomenology and sensors and how they contribute to models for remote sensing data. The text then presents image processing techniques and interprets them in terms of these

models Spectral spatial and geometric models are used to introduce advanced image processing techniques such as hyperspectral image analysis fusion of multisensor images and digital elevation model extraction from stereo imagery The material is suited for graduate level engineering physical and natural science courses or practicing remote sensing scientists Each chapter is enhanced by student exercises designed to stimulate an understanding of the material Over 300 figures are produced specifically for this book and numerous tables provide a rich bibliography of the research literature
