

# What is **NANOTECHNOLOGY**?

**Nanotechnology** is a scientific discipline that focuses on the study and manipulation of materials and systems at the nanoscale, which is a very small scale.

Using special techniques, scientists can control and **manipulate matter at the level of atoms and molecules**, allowing them to create new materials and devices with unique properties and functions.

**Nanotechnology** has applications in various fields, such as medicine, electronics, and energy, and promises significant advances in areas such as disease detection and treatment, the creation of stronger materials, and the miniaturization of technological devices.
