Understanding Computers Grace Murray Hopper, Steven L. Mandell, 1987 *Understanding Computers* Ellen McGill, Donald DiCristoforo, 1989 [Understanding Computers, Smartphones and the Internet](#) Ernie Dainow, 2016 Most introductory books about computers are long detailed technical books such as those used in a computer

science course or else tutorials that provide instructions on how to operate a computer with little description of what happens inside the machine This book fits in the large gap between these two extremes It is for people who would like to understand how computers work without having to learn a lot of technical details Only the most important things about computers are covered There is no math except some simple arithmetic The only prerequisite is knowing how to use a web browser As an alternative or adjunct to reading the book you can watch a series of short videos by going to youtube com and searching for Understanding Computers Smartphones and the Internet Only current day technology is covered People who are interested in learning about how computers evolved from the earliest machines can read the companion book A Concise History of Computers Smartphones and the Internet While originally intended for people who are not in the computer field this book is also useful for those taking a coding course or an introductory computer science course Even people already in the computer field will find things of interest in this book

Self-Producing Systems John Mingers, 2013-11-21 John Mingers new volume Self Producing Systems Implications and Applications of Autopoiesis is a much needed reference on autopoiesis a subject penetrating many disciplines today I can genuinely say that I enjoyed reading the book as it took me stage by stage through a clear and easy to grasp understanding of the concepts and ideas of auto poiesis and then as the book s title suggests on through their applications I found the summary in Chapter 12 particularly useful helping to crystalize the main points of each chapter The book conveyed enthusiasm for the subject and stimulated my interest in it At times the book is demanding but only because of the breadth of the subject matter the terms and concepts associated with its parts and the challenge of keep ing hold of all this in the mind at once This is an exceptional text

ROBERT L FLOOD Hull UK Preface In recent years Maturana s and Varela s concept of autopoiesis origi nally a biological concept has made a remarkable impact not just on a single area but across widely differing disciplines such as sociology policy science psychotherapy cognitive science and law Put very briefly the term autopoiesis connotes the idea that certain types of sys tems exist in a particular manner they are self producing systems In their operations they continuously produce their own constituents their own components which then participate in these same production pro cesses

Minds William J. Clancey, Stephen W. Smoliar, Mark Stefik, 1994 One place where the scientific debate has been written for a broad audience is in the book review column of the international journal Artificial Intelligence which has evolved from simple reviews to a multidisciplinary forum where reviewers and authors debate the latest often competing theories of human and artificial intelligence

Understanding Computers and Cognition Mark Stefik, 1987 *Understanding Computers and Cognition* Terry Winograd, Fernando Flores, 1987 Understanding Computers and Cognition presents an important and controversial new approach to understanding what computers do and how their functioning is related to human language thought and action While it is a book about computers Understanding Computers and Cognition goes beyond the specific

issues of what computers can or can't do. It is a broad-ranging discussion exploring the background of understanding in which the discourse about computers and technology takes place. *Understanding Computers and Cognition* is written for a wide audience, not just those professionals involved in computer design or artificial intelligence. It represents an important contribution to the ongoing discussion about what it means to be a machine and what it means to be human. Book jacket

The Human Needs Valentin Matcas, 2013-03-20 Everything that you do in life, you do to fulfill needs and meanings, including social demands, security needs, eating needs, developmental needs, addictions, recovery needs, reproduction, competitive needs, and learning at all cognitive, existential, and social levels. Furthermore, you must follow laws and moral codes as you fulfill your needs, but can you follow these simultaneously? You might smile slightly here since experience is personalized and therefore unique throughout life and throughout the world, but should this actually be the case? Why should social laws and human needs interfere in a human world? Why should you ever encounter problems as a living human being in a human world? What are your needs and feelings exactly, and what do they make you do? Who exactly sends you your human needs? Is everything that you know about the human needs pertinent enough to assure a meaningful, successful, and fulfilling life? Because everybody ends up in dreadful circumstances at times, struggling with various problems, it happens to you and to everybody else, so why should you ever have to fail in life at least occasionally as a human being while following social rules and human needs simultaneously? Yet since it happens to everybody, can humans actually be at fault? Because if humans themselves are considered faulty, incapable, and compromised in a human world through their own natural human needs and feelings, then what exactly do laws and authorities seek if they do not serve humans, society, human needs, and human fulfillment the most? All human needs are specific types of feelings, part of the human cognition, part of humans, and therefore part of life. While it seems that authorities hold you responsible for everything that life demands from you through your human feelings and human needs, ending up judging life through you while punishing you dreadfully, done deliberately to reach you to exploit you or to remove you systematically. Since everybody becomes involved when you must fail in the current society as you have to be highly capable to manage both life and society simultaneously while you do not smile slightly anymore. Furthermore, you notice how you cannot find to learn anything on this topic, but only laws, codes, stereotypes, and

irrelevant or trivial beliefs While as you study everything closely you notice the human condition marked by the human needs and feelings on one side and by people s ignorance of the human needs and feelings on the other Throughout this book we study the comprehensive human condition as it starts with the human needs We identify and analyze all needs feelings fulfillment behavior reasoning and meaning while understanding life cognition society and the wider world altogether If you seek to learn more about yourself and the human needs this book is for you Understanding Computers and Information Processing Charles S. Parker,1990 *Computers for Artificial Intelligence Applications* Benjamin W. Wah,Guo-Jie Li,1986
