Secure Computer and Network Systems Nong Ye, 2008-04-15 Computer and network systems have given us unlimited opportunities of reducing cost improving efficiency and increasing revenues as demonstrated by an increasing number of computer and network applications Yet our dependence on computer and network systems has also exposed us to new risks which threaten the security of and present new challenges for protecting our assets and information on computer and network systems The reliability of computer and network systems ultimately depends on security and quality of service QoS performance This book presents quantitative modeling and analysis techniques to address these numerous challenges in cyber attack prevention and detection for security and QoS including the latest research on computer and network behavior under attack and normal use conditions new design principles and algorithms which can be used by engineers and practitioners to build secure computer and network systems enhance security practice and move to providing QoS assurance on the Internet mathematical and statistical methods for achieving the accuracy and timeliness of cyber attack detection with the lowest computational overhead guidance on managing admission control scheduling reservation and service of computer and network jobs to assure the service stability and end to end delay of those jobs even under Denial of Service attacks or abrupt demands Secure Computer and Network Systems Modeling Analysis and Design is an up to date resource for practising engineers and researchers involved in security reliability and quality management of computer and network systems It is also a must read for postgraduate students developing advanced technologies for improving computer network dependability

Group Coordination Support in Networked Multimedia Systems Hans-Peter Dommel, 1999 Advances in computer hardware and networking technology have incited the deployment of large scale group

oriented applications for delivery or interactive development of multimedia content in the Internet There is a growing number of protocols and techniques for group communication and membership services in the IP multicast framework however group coordination support for telecollaborative tasks such as videoconferencing or distributed interactive simulation has received little attention In this dissertation we address network control and coordination functions to orchestrate synchronous multimedia groupwork establishing a sharing discipline on multimedia resources and guaranteeing consistency of distributed activities with ordered multicasting We introduce a formal framework for group coordination and a turn taking abstraction useful for evaluating coordination protocols Elemental design choices for group coordination architectures and the concept of aggregated processing of coordination information are discussed
