**Under the Weather** National Research Council, Division on Earth and Life Studies, Board on Atmospheric Sciences and Climate, Committee on Climate, Ecosystems, Infectious Disease, and Human Health, 2001-06-29 Since the dawn of medical science people have recognized connections between a change in the weather and the appearance of epidemic disease With today's technology some hope that it will be possible to build models for predicting the emergence and spread of many infectious diseases based on climate and weather forecasts However separating the effects of climate from other effects presents a tremendous scientific challenge Can we use climate and weather forecasts to predict infectious disease outbreaks Can the field of public health advance from surveillance and response to prediction and prevention And perhaps the most important question of all Can we predict how global warming will affect the emergence and transmission of infectious disease agents around the world Under the Weather evaluates our current understanding of the linkages among climate ecosystems and infectious disease it then goes a step further and outlines the research needed to improve our understanding of these linkages The book also examines the potential for using climate forecasts and ecological observations to help predict infectious disease outbreaks identifies the necessary components for an epidemic early warning system and reviews lessons learned from the use of climate forecasts in other realms of human activity The System of the Weather of the British Islands George Mackenzie (Lieutenant of the Perthshire Militia.), 1821 The Weather Map Great Britain.
