Stochastic Dynamic Equations Suman Sanyal, 2008 We propose a new area of mathematics namely stochastic dynamic equations which unifies and extends the theories of stochastic differential equations and stochastic difference equations After giving a brief introduction to the theory of dynamic equations on time scales we construct Brownian motion on isolated time scales and prove some of its properties Then we define stochastic integrals on isolated time scales The main contribution of this dissertation is to give explicit solutions of linear stochastic dynamic equations on isolated time scales We illustrate the theoretical results for dynamic stock prices and Ornstein Uhlenbeck dynamic equations Finally we study almost sure asymptotic stability of stochastic dynamic equations and mean square stability for stochastic dynamic Volterra type equations Abstract leaf iii

Bounded Dynamic Stochastic Systems
Hong Wang, 2000-02-25 Over the past decades although stochastic system control has been studied intensively within the field of control engineering all the modelling and control strategies developed so far have concentrated on the performance of one or two output properties of the system such as minimum variance control and mean value control The general assumption used in the formulation of modelling and control strategies is that the distribution of the random signals involved is Gaussian In this book a set of new approaches for the control of the output probability density function of stochastic dynamic systems those subjected to any bounded random inputs has been developed In this context the purpose of control system design becomes the selection of a control signal that makes the shape of the system outputs p d f as close as possible to a given distribution The book contains material on the subjects of Control of single input single output and multiple input multiple output stochastic systems Stable adaptive control of stochastic distributions Model reference adaptive control Control of nonlinear dynamic stochastic systems Condition monitoring of bounded stochastic distributions Control algorithm design Singular stochastic systems A new representation of dynamic stochastic systems is produced by using B spline functions to describe the output p d f Advances in Industrial Control aims to report and encourage the transfer of technology in control engineering The rapid development of control technology has an impact on all areas of the control discipline The series offers an opportunity for researchers to present an extended exposition of new work in all aspects of industrial control
