Scheduling of Resource-Constrained Projects Robert Klein, 2012-12-06 Project management has become a widespread instrument enabling organizations to efficiently master the challenges of steadily shortening product life cycles global markets and decreasing profit margins With projects increasing in size and complexity their planning and control represents one of the most crucial management tasks This is especially true for scheduling which is concerned with establishing execution dates for the sub activities to be performed in order to complete the project The ability to manage projects where resources must be allocated between concurrent projects or even sub activities of a single project requires the use of commercial project management software packages However the results yielded by the solution procedures included are often rather unsatisfactory Scheduling of Resource Constrained Projects develops more efficient procedures which can easily be integrated into software packages by incorporated programming languages and thus should be of great interest for practitioners as well as scientists working in the field of project management The book is divided into two parts In Part I the project management process is described and the management tasks to be accomplished during project planning and control are discussed This allows for identifying the major scheduling problems arising in the planning process among which the resource constrained project scheduling problem is the most important Part II deals with efficient computer based procedures for the resource constrained project scheduling problem and its generalized version Since both problems are NP hard the development of such procedures which yield satisfactory solutions in a reasonable amount of computation time is very challenging and a number of new and very promising approaches are introduced This includes

heuristic procedures based on priority rules and tabu search as well as lower bound methods and branch and bound procedures which can be applied for computing optimal solutions **Smart and Sustainable Technologies: Rural and Tribal Development Using IoT and Cloud Computing** Srikanta Patnaik, Roumen Kountchev, Vipul Jain, 2022-07-27 This book presents a collection of peer reviewed best selected research papers presented at the First International Conference on Smart and Sustainable Technologies ICSST 2021 organized by Department of ECE GIET University Gunupur Rayagada Odisha India during December 16 18 2021 The proceedings of the conference have a special focus on the developments of local tribe and rural people using smart and sustainable technologies It is an interdisciplinary platform for researchers practitioners and educators as well as NGO workers who are working in the area of web engineering IoT and cloud computing Internet of Everything data science artificial intelligence machine learning computer vision and intelligent robotics particularly for the rural and tribal development *Project Scheduling under Limited Resources* Sönke Hartmann, 1999-11-17 Approaches to

project scheduling under resource constraints are discussed in this book After an overview of different models it deals with exact and heuristic scheduling algorithms The focus is on the development of new algorithms Computational experiments demonstrate the efficiency of the new heuristics Finally it is shown how the models and methods discussed here can be applied to projects in research and development as well as market research **Operations Research** Günter Fandel, Hermann Gehring, 2012-12-06 Tomas Gal zum 65 Geburtstag **Project Scheduling** Erik Leuven Demeulemeester, Willy S. Herroelen, 2006-04-11 Our objectives in writing *Project Scheduling A Research Handbook* are threefold 1 Provide a unified scheme for classifying the numerous project scheduling problems occurring in practice and studied in the literature 2 Provide a unified and up to date treatment of the state of the art procedures developed for their solution 3 Alert the reader to various important problems that are still in need of considerable research effort *Project Scheduling A Research Handbook* has been divided into four parts Part I consists of three chapters on the scope and relevance of project scheduling on the nature of project scheduling and finally on the introduction of a unified scheme that will be used in subsequent chapters for the identification and classification of the project scheduling problems studied in this book Part II focuses on the time analysis of project networks Part III carries the discussion further into the crucial topic of scheduling under scarce resources Part IV deals with robust scheduling and stochastic scheduling issues Numerous tables and figures are used throughout the book to enhance the clarity and effectiveness of the discussions For the interested and motivated reader the problems at the end of each chapter should be considered as an integral part of the presentation

and Scarce Resources Klaus Neumann, Christoph Schwindt, Jgen Zimmermann, 2002 The book presents the state of the art of deterministic resource constrained project scheduling with time windows General temporal constraints arising from minimum and maximum time lags between project activities and several different types of limited resources are considered A large variety of time based financial and resource based objectives important in practice are studied A thorough structural analysis of the feasible region of project scheduling problems and a classification and detailed investigation of objective functions are performed which can be exploited for developing efficient exact and heuristic solution methods New interesting applications of project scheduling to production and operations management as well as investment projects are discussed in the second edition Advances in Project Scheduling Roman Słowiński, Jan Węglarz, 1989 This multi author volume containing contributions from international experts in the field presents recent developments in project scheduling for both theory and practice It is organized in three parts I Basic deterministic models II Special deterministic models III Stochastic models A variety of approaches is presented dealing with multiple category resource constraints different mathematical models of activities and various project performance measures in single and multiobjective formulation Exact and heuristic algorithms are presented for both deterministic and stochastic project description The volume will be of special interest to scientists students decision makers executive managers consultants and practitioners involved in systems management or operations research in particular in business engineering and finance but also in other areas of pure and applied sciences
