Treese, 2018-05-17 This book discusses how and why historical measurement units developed and reviews useful methods for making conversions as well as situations in which dimensional analysis can be used It starts from the history of length measurement which is one of the oldest measures used by humans It highlights the importance of area measurement briefly discussing the methods for determining areas mathematically and by measurement The book continues on to detail the development of measures for volume mass weight time temperature angle electrical units amounts of substances and light intensity The seven SI metric base units are highlighted as well as a number of other units that have historically been used as base units Providing a comprehensive reference for interconversion among the commonly measured quantities in the different measurement systems with engineering accuracy it also examines the relationships among base units in fields such as mechanical thermal electromagnetic and physical flow rates and fluxes using diagrams Flow in the Base Region of Axisymmetric and Two-dimensional Configurations Milton A. Beheim, 1961 A theoretical and experimental investigation has been conducted of the pressure distribution on the surface of either a circular cylinder or a truncated cone located within the base region of another circular cylinder at Mach number 2 A similar analysis of pressure distribution was made for rearward facing two dimensional steps and theoretical results were compared with experimental results of earlier investigations Theoretical base pressure ratios of two dimensional steps agreed well with experimental results however as a result of the simplifying assumptions made for axisymmetric configurations only a range of values for theoretical base pressure ratio could be calculated within which the experimental results were expected to occur The data generally followed the trends predicted by the theory and deviations apparently could be explained A Reanalysis of the Base Rate Problem Through Understanding Subjects' Judgmental Reasonings Wing-Shing Chan, 1990 **The Principles of Dynamics.
