

The Vascular System

What is the vascular system?

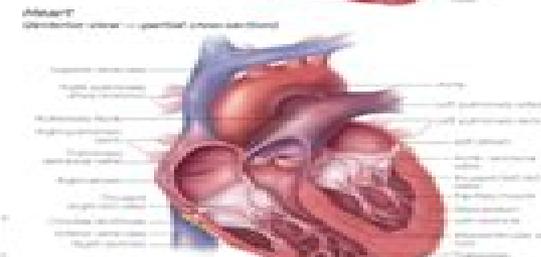

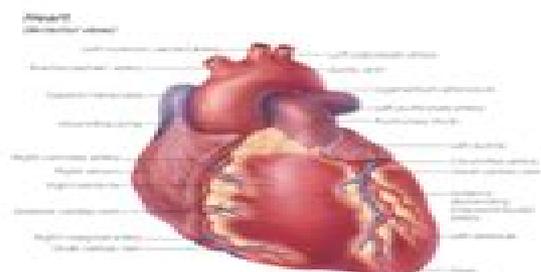

The vascular system is a network of blood vessels that transport blood throughout the body. It consists of the heart, arteries, and veins. The system is responsible for delivering oxygen and nutrients to the body's cells and removing waste products.

The heart

The heart is a muscular organ that pumps blood throughout the body. It consists of four chambers: the right atrium, right ventricle, left atrium, and left ventricle. The heart is surrounded by a protective sac called the pericardium.

Typical artery (cross-section)

Blood vessels

Blood vessels are the network of tubes that carry blood to and from the body's cells. They are divided into arteries, veins, and capillaries. Arteries carry oxygenated blood away from the heart, while veins carry deoxygenated blood back to the heart. Capillaries are the smallest blood vessels and are where the exchange of oxygen and nutrients occurs.

Importance of pressure

Blood pressure is the force exerted by the blood against the walls of the blood vessels. It is essential for the flow of blood through the vascular system. High blood pressure can damage the blood vessels and lead to heart disease, while low blood pressure can result in inadequate blood flow to the body's cells.

Arterial valve work

Arterial valves are located in the arteries and help to prevent the backflow of blood. They are located at the junctions of the arteries and are closed when the heart is relaxed, allowing blood to flow only towards the heart.
