**Stellar Collapse** Chris L. Fryer, 2004-04-30 Supernovae hypernovae and gamma ray bursts are among the most energetic explosions in the universe The light from these outbursts is for a brief time comparable to billions of stars and can outshine the host galaxy within which the explosions reside Most of the heavy elements in the universe are formed within these energetic explosions Surprisingly enough the collapse of massive stars is the primary source of not just one but all three of these explosions As all of these explosions arise from stellar collapse to understand one requires an understanding of the others Stellar Collapse marks the first book to combine discussions of all three phenomena focusing on the similarities and differences between them Designed for graduate students and scientists newly entering this field this book provides a review not only of these explosions but the detailed physical models used to explain them from the numerical techniques used to model neutrino transport and gamma ray transport to the detailed nuclear physics behind the evolution of the collapse to the observations that have led to these three classes of explosions *Supernovae, Neutrinos, and Neutron Stars* Hong-ye Chiu, 1964 **Ninth Texas Symposium on Relativistic Astrophysics** Jürgen Ehlers, Judith J. Perry, Martin Walker, 1980 Sixth Marcel Grossmann Meeting, The: On Recent Developments In Theoretical And Experimental General Relativity, Gravitation And Relativistic Field Theories (In 2 Volumes) Humitaka Sato, 1993-01-08 The Marcel Grossmann Meetings have been conceived with the aim of reviewing recent advances in gravitation and general relativity with particular emphasis on mathematical foundations and physical predictions The overall programme includes the broad categories of mathematical techniques cosmology quantum gravity astrophysics gravitational radiation and experimental developments The proceedings contain invited and contributed papers **NASA Technical Note**, 1964 **GRAVITATIONAL WAVES FROM STELLAR COLLAPSE.**, 2001 Stellar core collapse plays an important role in nearly all facets of astronomy cosmology as standard candles formation of compact objects nucleosynthesis and energy deposition in galaxies In addition they release energy in powerful explosions of light over a range of energies neutrinos and the subject of this meeting gravitational waves Because of this broad range of importance astronomers have discovered a number of constraints which can be used to help them understand the importance of stellar core collapse as gravitational wave sources New and Exotic Phenomena '90 Orrin Fackler, J. this field We thought that time had come to organize a general confrontation of the new results obtained in the approach of the gravitational N body problem by different methods in the investigation of spherical and flattened systems in the comparisons with observations and in more theoretical speculations on orbits integrals of motion dense nuclei or relativistic stellar dynamics Things were made easy by the support of Commissions 33 and 37 which welcomed the proposition and by 1 R King who accepted to act as Chairman of the Scientific Organizing Committee The final decision to meet in Besançon was taken during the XVth General Assembly of the IAU in Sydney in August 1973 The members of the Organizing Committee were 1 R King Chairman G Contopoulos A Hayli M Hénon G Hori D Lynden-Bell L Perek L Spitzer R Wielen Ya Zel'dovich while the members of the Local Committee were A
