Guide Green Building:

The Complete Idiot's Guide to Green Building and Remodeling John Barrows, Lisa Iannucci, 2009-01-06 It's easy building green. This guide helps environmentally conscious people make real world decisions about building or remodeling a home. Readers will find information on how to save money by going green when building or remodeling, how to find the right green integrated system design, how to choose heating and cooling equipment, and how to save money on water. Focuses on the design integration of green materials. Residential and commercial green building will grow from 2% of the U.S. construction market in 2005 to as much as 10% in 2010. NAHB. More than 80 regional and local green building programs are in place in the U.S. and more are being promoted in the private sector.

Green Building Materials Ross Spiegel, Dru Meadows, 2010-11-09 GREEN BUILDING MATERIALS THE ULTIMATE USER'S MANUAL TO GREEN BUILDING MATERIALS To properly select and specify green building materials, successful architects need authoritative real world advice on how to select and use nontoxic, recycled, and recyclable products, and how to integrate these products into the design process in order to capitalize on the many practical and economic advantages of going green. *Green Building Materials* Third Edition is the most reliable up to date resource to meet today's green building challenges from reducing waste and improving energy efficiency to promoting proper code compliance and safeguarding against liability claims. Written by two nationally known experts on green building methods and materials, *Green Building Materials* Third Edition offers in depth practical information on the product selection, product specification, and construction process. This new Third Edition is an excellent hands on guide to today's newest range of green building materials: what they are, where to find them, how to use them effectively, and how to address LEED requirements. Organized by CSI MasterFormat category for fast access to specific information, it features a new chapter on eco labels, green standards, and product certification. A new appendix providing reference information for sustainability standards and standards development organizations. New sample specifications including green power requirements, vegetated green roof systems, rainwater harvesting, and water reuse systems. Revised and updated review of trends affecting the future of green building materials. Updated approach and reference information for the product selection process. *Green Building Materials* Third Edition is an essential tool for designing environmentally friendly buildings, ones made from materials that preserve the Earth's natural legacy for future generations.

Guide to Green Building Rating Systems Linda Reeder, 2010-03-29 The one stop guide for choosing a green building rating system. Today sustainability is a growing concern for the architects, designers, builders, and owners of commercial and residential buildings. Meeting the requirements of a rating system provides a metric to evaluate and set priorities. But the variety and complexity of methods available to assess the eco friendliness of a building can seem overwhelming. *Guide to Green Building Rating Systems* informs readers about the rating system selection process. Comparing essential issues such as cost, ease of use, and building performance, this book offers solid guidance that will help readers find

the rating system that best fits their needs This easy to follow reference includes An overview of the major national rating systems including LEED Green Globes the National Green Building Standard and ENERGY STAR An in depth look at each rating system including its evolution objectives point structure levels of certification benefits and shortcomings How the ratings systems work for different types of buildings commercial multi family residential and single family residential construction Illustrated case studies from different climate regions with project descriptions cost data and lessons learned by design teams constructors and owners An overview of local regional and international rating systems Guide to Green Building Rating Systems demystifies complex material making this book an essential reference for building professionals engaged in or wishing to pursue sustainable building practices

The Integrative Design Guide to Green Building 7group, Bill Reed, 2009-04-13. The members of 7group and Bill Reed are examples writ large of the kind of leadership that is taking this idea of green building and forming it into reality by helping change minds, building practice and design process from the Foreword by S Rick Fedrizzi, President, CEO and Founding Chair, U.S. Green Building Council. A whole building approach to sustainability. The integrative design process offers a new path to making better green building decisions and addressing complex issues that threaten living systems. In *The Integrative Design Guide to Green Building: Redefining the Practice of Sustainability*, 7group's principals and integrative design pioneer Bill Reed introduce design and construction professionals to the concepts of whole building design and whole systems. With integrative thinking that reframes what sustainability means, they provide a how-to guide for architects, designers, engineers, developers, builders, and other professionals on incorporating integrative design into every phase of a project. This practical manual explains the philosophy and underpinnings of effective integrative design, addressing systems thinking and building and community design from a whole living system perspective. Details how to implement integrative design from the discovery phase to occupancy, supported by process outlines, itemized tasks, practice examples, case studies, and real world stories illustrating the nature of this work. Explores the deeper understanding of integration that is required to transform architectural practice and our role on the planet. This book, both practical and thoughtful, will help you deliver your vision of a sustainable environment.

Marketing Green Buildings Jerry Yudelson, 2006. Engineers, architects, and contractors seeking to expand their involvement in the green buildings market need a firm grounding in the marketing strategies and tactics which are being used most successfully in this specialized and growing field. This book is intended to serve as an effective tool for professional green building enthusiasts and advocates in presenting green design features, sustainable strategies, and new products to the potential green building client. The author addresses key questions such as: How is green building marketing different from other types of professional service marketing? What tools and techniques from conventional marketing can be used to greater effect in marketing green buildings? What is the size and potential of the green buildings market? And how should a firm position itself to succeed in this growing marketplace? You'll find clear descriptions of successful strategies and approaches to marketing and selling green building related services, as well as up-to-date information on the role of LEED R in green building projects.

Becoming a Green Building Professional Holley Henderson, 2012-08-03. A career guide for professionals in sustainable architecture, design, planning, development, and related consulting. For those considering a new

career or a career change focused on green and sustainable building and design. Becoming a Green Building Professional offers practical information on educational requirements, career options, guidance, and tips, and first-hand interviews with green building professionals. Green Building Guidance Karthik Karuppu, NVICO, 2019-02-07. Conventional buildings don't have sustainability because of the approach of designing and the construction method. The total energy consumption for all buildings accounts for up to 40% in India, and commercial and residential real estate combined will account for more than 2000 TWh of energy consumption by 2030. India has an expected energy deficit of around 12%, which is one of the major hurdles for the government. This will result in a further increase in electrification in all areas. Green buildings utilize fewer resources and are healthier to live in. They offer significant operational cost savings compared with conventional buildings. In effect, green homes can expect a 14 percent savings in operational costs over five years for new green buildings and 13 percent savings in operational costs over five years for green retrofit and renovation projects. Building owners also report that green buildings, whether new or renovated, give a 7 percent increase in asset value over conventional buildings.

The Complete Guide to Green Building & Remodeling Your Home Martha Maeda, 2011. In today's economy and socially conscious environment regarding the environment, many people cannot afford not to start considering ways they can build or remodel their home to ensure it is green. With scientific sources such as the UN Council on Global Warming making statements about the degradation of ice flow and environmental conditions by 2050 and the likelihood that crude oil sources will be used up within the next fifty years, it is especially necessary for young families to consider the implications of re-examining their homes and living situations to be more green. This book will guide you and your family through the process of learning more about and implementing the necessary changes and perspectives needed to change your home or build a new home that is environmentally conscious and prepared for the changing economic and environmental climate in the coming decades. You will learn why people have started to build green and how it can be done in today's regulatory and cost conditions quickly and inexpensively. You will learn how to remodel with green in mind and how to start working with building professionals that can provide the necessary materials, plans, and paperwork you need to proceed. You will learn which materials are best for green building by lifespan and how to choose between various green materials. You will learn how to not only use green materials but to make sure the construction process is green as well. You will learn the basics of framing your building, natural building methods, the energy systems you might use, and the heating/cooling options at your disposal. Construction and environmental experts have been interviewed, and their expertise is included in this book to help you learn everything you need to accomplish the above, as well as to know what kinds of water and waste systems are best, how to site, plan, and landscape your home, and what the most common myths about green building are. You will learn ten

things you can do on any building project to keep it green and any materials you should always have on hand for anything you do around the house Regardless of whether you are just looking to remodel to make your house greener or are building a new home this book will give you everything you need to stay green and respect the environment with your home **Green Building Illustrated** Francis D.
