Soft Methodology For Random Information Systems:

Soft Methods for Integrated Uncertainty Modelling Jonathan Lawry, Enrique Miranda, Alberto Bugarin, Shoumei Li, Maria Angeles Gil, Przemyslaw Grzegorzewski, Olgierd Hryniewicz, 2007-10-08 The idea of soft computing emerged in the early 1990s from the fuzzy systems community and refers to an understanding that the uncertainty imprecision and ignorance present in a problem should be explicitly represented and possibly even exploited rather than either eliminated or ignored in computations For instance Zadeh defined Soft Computing as follows Soft computing differs from conventional hard computing in that unlike hard computing it is tolerant of imprecision uncertainty and partial truth In effect the role model for soft computing is the human mind Recently soft computing has to some extent become synonymous with a hybrid approach combining AI techniques including fuzzy systems neural networks and biologically inspired methods such as genetic algorithms Here however we adopt a more straightforward definition consistent with the original concept Hence soft methods are understood as those uncertainty formalisms not part of mainstream statistics and probability theory which have typically been developed within the AI and decision analysis community These are mathematically sound uncertainty modelling methodologies which are complementary to conventional statistics and probability theory Granular, Fuzzy, and Soft Computing Tsau-Young Lin, Churn-Jung Liau, Janusz Kacprzyk, 2023-03-29 The first edition of the Encyclopedia of Complexity and Systems Science ECSS 2009 presented a comprehensive overview of granular computing GrC broadly divided into several categories Granular computing from rough set theory Granular Computing in Database Theory Granular Computing in Social Networks Granular Computing and Fuzzy Set Theory Grid Cloud Computing as well as general issues in granular computing In 2011 the formal theory of GrC was established providing an adequate infrastructure to support revolutionary new approaches to computer data science including the challenges presented by so called big data For this volume of ECSS Second Edition many entries have been updated to capture these new developments together with new chapters on such topics as data clustering outliers in data mining qualitative fuzzy sets and information flow analysis for security applications Granulations can be seen as a natural and ancient methodology deeply rooted in the human mind Many daily things are routinely granulated into sub things The topography of earth is granulated into hills plateaus etc space and time are granulated into infinitesimal granules and a circle is granulated into polygons of infinitesimal sides Such granules led to the invention of calculus topology and non standard analysis Formalization of general granulation was difficult but as shown in this volume great progress has been made in combining discrete and continuous mathematics under one roof for a broad range of applications in data science **Computer Recognition Systems 2** Marek Kurzynski, Edward Puchala, Michal Wozniak, Andrzej Zolnierak, 2007-10-18 This book presents the results of the 5th International Conference on Computer Recognition Systems CORES 07 held 22-25 October 2007 in Hotel Tumski Wroclaw Poland It brings together original research results in both methodological issues and different application areas of pattern recognition The contributions cover

all topics in pattern recognition including for example classification and interpretation of text video and voice

Methodology and Random Information Systems Miguel López-Díaz, 2004-07-30 The analysis of experimental data resulting from some underlying random process is a fundamental part of most scientific research Probability Theory and Statistics have been developed as flexible tools for this analysis and have been applied successfully in various fields such as Biology Economics Engineering Medicine or Psychology However traditional techniques in Probability and Statistics were devised to model only a single source of uncertainty namely randomness In many real life problems randomness arises in conjunction with other sources making the development of additional softening approaches essential This book is a collection of papers presented at the 2nd International Conference on Soft Methods in Probability and Statistics SMPS 2004 held in Oviedo providing a comprehensive overview of the innovative new research taking place within this emerging field

Soft Systems Methodology Peter Checkland, 1999 Systems Thinking Systems Practice Whether by design accident or merely synchronicity Checkland appears to have developed a habit of writing seminal publications near the start of each decade which establish the basis and framework for systems methodology research for that decade Hamish Rennie Journal of the Operational Research Society 1992 Thirty years ago Peter Checkland set out to test whether the Systems Engineering SE approach highly successful in technical problems could be used by managers coping with the unfolding complexities of organizational life The straightforward transfer of SE to the broader situations of management was not possible but by insisting on a combination of systems thinking strongly linked to real world practice Checkland and his collaborators developed an alternative approach Soft Systems Methodology SSM which enables managers of all kinds and at any level to deal with the subtleties and confusions of the situations they face This work established the now accepted distinction between hard systems thinking in which parts of the world are taken to be systems which can be engineered and soft systems thinking in which the focus is on making sure the process of inquiry into real world complexity is itself a system for learning Systems Thinking Systems Practice 1981 and Soft Systems Methodology in Action 1990 together with an earlier paper Towards a Systems based Methodology for Real World Problem Solving 1972 have long been recognized as classics in the field Now Peter Checkland has looked back over the three decades of SSM development brought the account of it up to date and reflected on the whole evolutionary process which has produced a mature SSM SSM A 30 Year Retrospective here included with Systems Thinking Systems Practice closes a chapter on what is undoubtedly the most significant single research programme on the use of systems ideas in problem solving Now retired from full time university work Peter Checkland continues his research as a Leverhulme Emeritus Fellow
