Views on Evolvability of Embedded Systems Pierre Van de Laar, Teade Punter, 2010-10-20 Evolvability the ability to respond effectively to change represents a major challenge to today s high end embedded systems such as those developed in the medical domain by Philips Healthcare These systems are typically developed by multi disciplinary teams located around the world and are in constant need of upgrading to provide new advanced features to deal with obsolescence and to exploit emerging enabling technologies Despite the importance of evolvability for these types of systems the field has received scant attention from the scientific and engineering communities *Views on Evolvability of Embedded Systems* focuses on the topic of evolvability of embedded systems from an applied scientific perspective In particular the book describes results from the Darwin project that researched evolvability in the context of Magnetic Resonance Imaging MRI systems This project applied the Industry as Laboratory paradigm in which industry and academia join forces to ensure continuous knowledge and

technology transfer during the project's lifetime The Darwin project was a collaboration between the Embedded Systems Institute the MRI business unit of Philips Healthcare Philips Research and five Dutch universities Evolvability was addressed from a system engineering perspective by a number of researchers from different disciplines such as software electrical and mechanical engineering with a clear focus on economic decision making The research focused on four areas data mining reference architectures mechanisms and patterns for evolvability in particular visualization they will not only find a state of the art overview on evolvability research but also guidelines to make systems more evolvable and new industrially validated techniques to improve the evolvability of embedded systems
