

Solar Energy

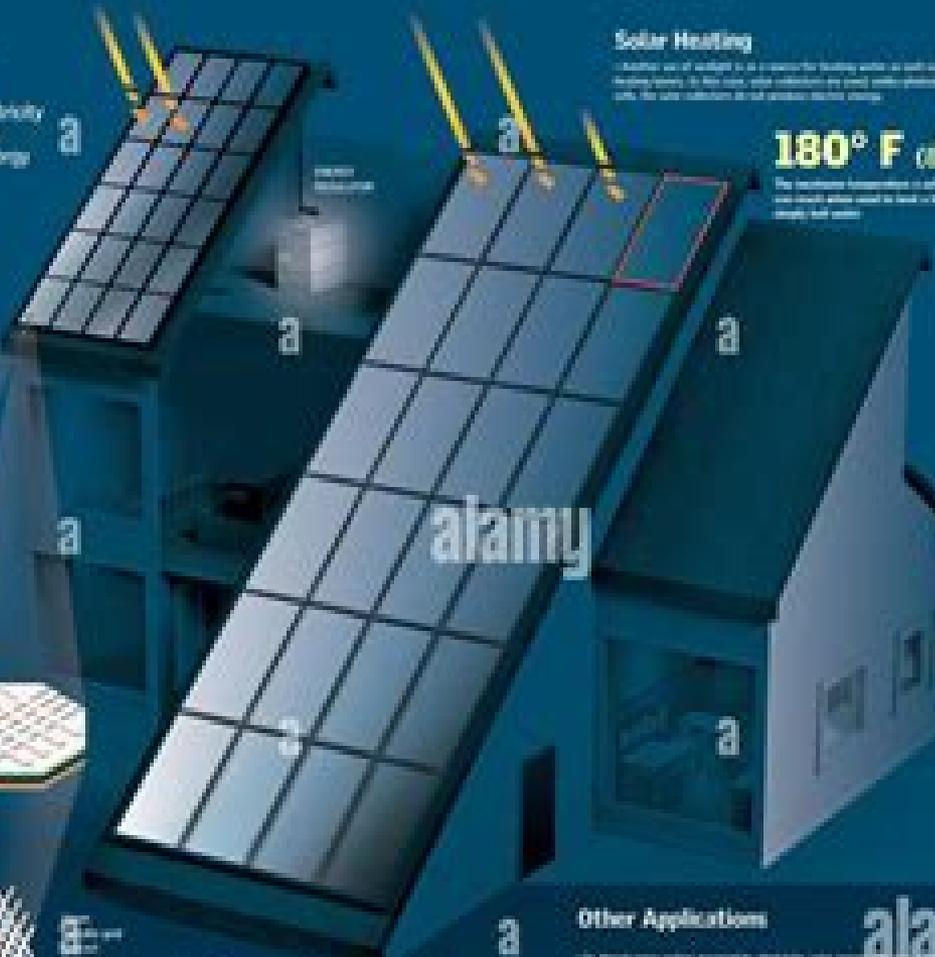

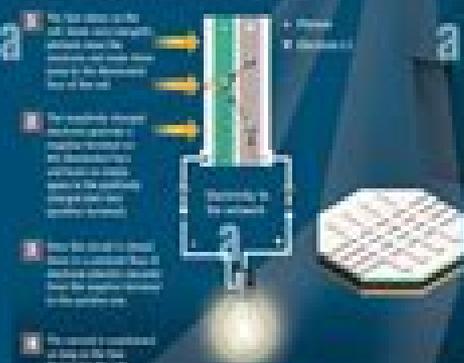

The harnessing of solar energy to produce electricity and heat for everyday use is gaining popularity. Applications of this clean, unlimited form of energy range from charging batteries in telecommunications satellites, to public transportation facilities, all the way to the solar households being built in greater numbers throughout the world.

Photovoltaic Energy

The energy obtained from sunlight through the use of a solar cell.

SOLAR CELL

It is a specially treated silicon layer of semiconductor material which converts solar energy into electricity. About 10% of the incident light energy is converted into electricity.

Solar Heating

A special use of sunlight is as a source for heating water as well as for heating spaces. In this case, solar collectors are used which absorb heat, the solar collector is an absorber of solar energy.

180° F (82° C)

The maximum temperature that can be reached in a solar collector.

THE COLLECTOR

It is a device that absorbs solar energy and converts it into heat. It is made of a material that has a high absorption coefficient and a low thermal conductivity. The collector is usually made of a metal or plastic material.

Production Flow

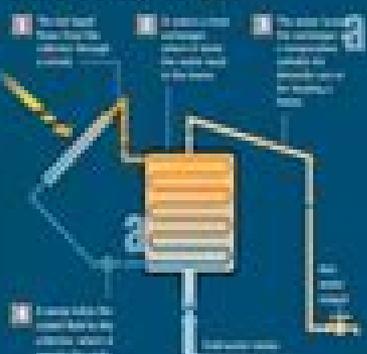

A collector is made of a metal plate which is coated with a black material. The collector is usually made of a metal or plastic material.

Absorber Plate

The absorber plate is a metal plate which is coated with a black material. The absorber plate is usually made of a metal or plastic material.
