 use as raw material **Taro, a Review of Colocasia Esculenta and Its Potentials** Jaw-Kai Wang, Sally Higa, 1983 Taro is
 a generally neglected crop that is an important staple in tropical countries It is safe to estimate that 400 million people use
 taro in their diets The importance of a comprehensive research and development program for taro should be viewed in light
 of a recent National Academy of Science study that points to two important facts One is that the United States must join the
 hungry nations to develop an agriculture that can feed the world or face food problems at home This is because food
 production in the United States is faltering yields are no longer increasing and increased energy inputs are starting to show
 diminishing returns Another point made by the study is that over the next twenty five years the new breadbaskets will be the
 developing countries They are the ones with the greatest capacity to increase food production A corollary to this is that
 neglected crops like taro have a potential that has not yet been fulfilled *Memoirs of the Imperial College of Tropical
