**The Trade and Investment Effects of Preferential Trading Arrangements** Philippa Dee, Jyothi Gali, 2003 This study quantifies the impact of traditional and new age provisions of preferential trading arrangements PTAs on merchandise trade and investment It does so by estimating gravity models of bilateral trade and investment It finds that recent and some past PTAs are not as benign as some contemporary empirical assessments have suggested A careful consideration of the analytical issues including controlling comprehensively for other observable and unobservable factors and testing explicitly for whether the trade and investment effects are significantly different after PTA formation than before accounts for less favourable finding in this study It is also possible for PTAs to have adverse effects on investment flows If investment responds in beachhead fashion to the trade provisions of PTAs the trade carried out from those beachheads could constitute traditional trade diversion However the paper finds little evidence of beachhead investment Instead it finds evidence of net investment creation in response to the new age non trade provisions of PTAs Thus the finding on investment is more positive than for trade but not without qualifications since trade diversion is still possible from the new investment positions

NBER website **Electrical Trading and Radio Marketing**, 1957 **Discovering Artificial Economics** David Batten, 2000-11-16 Discovering Artificial Economics is an informal introduction to the ideas of modern systems theory and self organization as they apply to problems in the economic realm David Batten interleaves anecdotes and stories with technical discussions in order to provide the general reader with a good feel for how economies function and change Using a wealth of examples from evolutionary game theory to stock markets to urban and traffic planning Batten shows how economic agents interact to produce the behavior we have come to recognize as economic life Despite the book s easy to read style Batten s message is quite profound Strongly interactive groups of agents can produce unexpected collective behavior emergent features which are lawful in their own right These patterns of emergent behavior are the hallmark of a complex self organizing economy Batten discards many traditional axioms of economic behavior Far from displaying perfectly deductive rationality to achieve a predictable economic equilibrium his agents face an economy that is open and dynamic There we find evolution heterogeneity and instabilities stochastic and deterministic phenomena unexpected regularities as well as equally unexpected large scale fluctuations Interacting agents are forced to be intuitive and adaptive because they must respond to a continuously changing economic landscape Because complexity theory attempts to study a large number of agents and their changing interaction patterns it often gets too difficult for a mathematical solution Thus many of the anecdotes and results discussed in the book have emerged from agent based computer simulations The message is that the social sciences are poised on the verge of a new

scientific era one in which economists will conduct experiments inside their own computers Welcome to the new age of
