Examining the 'Golden' Practices of Small-Scale Mining George Okyere Ofori, 2022-11-25 Scholarship on artisanal and small scale mining ASM has often portrayed mining regions as informal zones that suffer from environmental degradation problems Water pollution and degraded landscapes for example have long been noted as the inevitable consequence of the operations of ASM Such insistence on the institutional absences of ASM zones has dovetailed with a lack of academic attention to some of the golden mining practices taking place there Thus this work seeks to re examine the topic of development in ASM The findings suggest that small scale miners contrary to popular perception could be caretakers of the environment In addition emphasizing how the dynamic interplay between resources and environmental demands may come to support public policy the findings illustrate contrary to the dominant narrative how the activities of small scale mining operators can engender a win win situation for both mining companies and local mining communities

Sustainable Minerals Operations in the Developing World Geological Society of London, 2005 The sustainable development of minerals which are non renewable resources is a major challenge in today s world In this regard the true definition of sustainability is a debating point in itself can such a concept exist with respect to non renewable resources Perhaps the ideal sustainability model is one that minimizes negative environmental impact and maximizes benefits to society the economy and regional national development Developed and near developed economies rely for commodity supplies on developing countries where major mining operations are often a mainstay of the domestic economy Limited environmental regulation and low wages lead to charges of exploitation Also large numbers of people have no alternative to living by informal often dangerous artisanal mining This Special Publication gives examples from developing countries from all scales of mineral extraction The volume reviews environmental economic health and social problems and highlights the need to solve these before sustainability can be achieved The better solutions require mutual understanding through full involvement of all stakeholders education training and investment so that small scale and artisanal mines can grow into well managed
