

The image features a central logo for the State of Wisconsin Investment Board (SWIB). The logo consists of the letters "SWIB" in a large, gold, serif font, with "STATE OF WISCONSIN INVESTMENT BOARD" in a smaller, white, sans-serif font below it. The logo is set against a dark blue rectangular background. This central element is surrounded by a network of gold Bitcoin symbols (₿) connected by thin gold lines. The Bitcoin symbols are arranged in a circular pattern around the central logo, with some appearing inside white circles. The background of the entire image is a blurred photograph of several people in business attire shaking hands, suggesting a professional or financial context. The overall color palette is dominated by gold, blue, and white.

Advances in Plastid Biology and Its Applications Niaz Ahmad, Steven J. Burgess, Brent L. Nielsen, 2016-12-12 One of the distinguishing features of plants is the presence of membrane bound organelles called plastids Starting from proplastids undifferentiated plastids they readily develop into specialised types which are involved in a range of cellular functions such as photosynthesis nitrogen assimilation biosynthesis of sucrose starch chlorophyll carotenoids fatty acids amino acids and secondary metabolites as well as a number of metabolic reactions like sulphur metabolism The central role of plastids in many aspects of plant cell biology means an in depth understanding is key for a holistic view of plant physiology Despite the vast amount of research the molecular details of many aspects of plastid biology remains limited Plastids possess their own high copy number genome known as the plastome Manipulation of the plastid genome has been developed as an alternative way to developing transgenic plants for various biotechnological applications High copy number of the plastome site specific integration of transgenes through homologous recombination and potential to express proteins at high levels 70% of total soluble proteins has been reported in some cases are some of the technologies being developed Additionally plastids are inherited maternally providing a natural gene containment system and do not follow Mendelian laws of inheritance allowing each individual member of the progeny of a transplastomic line to uniformly express transgenes Both algal and higher plant chloroplast transformation has been demonstrated and with the ability to be propagated either in bioreactors or in the field both systems are well suited for scale up of production The manipulation of chloroplast genes is also essential for many approaches that attempt to increase biomass accumulation or re routing metabolic pathways for biofortification food and fuel production This includes metabolic engineering for lipid production adapting the light harvesting apparatus to improve solar conversion efficiencies and engineering means of suppressing photorespiration in crop species which range from the introduction of artificial carbon concentrating mechanisms or those pre existing elsewhere in nature to bypassing ribulose biphosphate carboxylase oxygenase entirely The purpose of this eBook is to provide a compilation of the latest research on various aspects of plastid biology including basic biology biopharming metabolic engineering bio fortification stress physiology and biofuel production
