The Pixel Eye Paul Levinson, 2004-06-26 The future is always shaped by the present New York City the next decade terrorism is more threatening than ever skyscrapers are a cherished defiant statement underground concourses have multiplied because of the sense of security they provide law enforcement and civil liberties groups clash over the proper boundary between public safety and personal freedom That s the tenor of the times when NYPD forensic detective Dr Phil D Amato is called in to investigate an urgent case squirrels missing from Central Park It sounded like a joke but Phil soon discovers it s anything but A new telecom technology can put implants into the brains of living squirrels to translate what they are seeing into computer viewable images But who s behind this surveillance breakthrough Federal agencies or terrorists Phil s latest adventure pits personal loyalties against public responsibilities privacy against freedom security against animal rights all against a backdrop of a near future post 9 11 New York City that is completely recognizable even with its new generation of advanced cellular phones free standing holograms tunneling technologies transport systems and forensic computers The Pixel Eye offers a vision of a future we may all soon be living in

**State of the Art in Computer Graphics** David F. Rogers, Rae Earnshaw, 2012-12-06 State of the Art in Computer Graphics Aspects of Visualization This is the fourth volume derived from a State of the Art in Computer Graphics Summer Institute It represents a snapshot of a number of topics in computer graphics topics which include visualization of scientific data modeling some aspects of visualization in virtual reality and hardware architectures for visu alization Many papers first present a background introduction to the topic followed by discussion of current work in the topic The volume is thus equally suitable for nonspecialists in a particular area and for the more experienced researcher in the field It also enables general readers to obtain an acquaintance with a particular topic area sufficient to apply that knowledge in the context of solving current problems The volume is organized into four chapters Visualization of Data Modeling Virtual Reality Techniques and Hardware Architectures for Visualization In the first chapter Val Watson and Pamela Walatka address the visual aspects of fluid dynamic computations They discuss algorithms for function mapped surfaces and cutting planes isosurfaces particle traces and topology extractions They point out that current visualization systems are limited by low information transfer bandwidth poor response to viewing and model accuracy modification requests mismatches between model rendering and human cognitive capabilities and ineffective interactive tools However Watson and Walatka indicate that proposed systems will correct most of these problems
