**Organic Agriculture in Germany. Business for the big players?** Moritz Stüber, 2018-10-17 Essay from the year 2017 in the subject Agrarian Studies grade 2 7 University of Hohenheim Institut für Sozialwissenschaften des Agrarbereichs language English abstract The history of organic agriculture OA in Germany is not only based on the lectures of its founder Rudolf Steiner OA in its present status as a developed economic branch is far more for example the result of ecological and political movements against globalisation and intensification in the 70 s rise of the Greens Economic and environmental failure as in the 1973 oil crisis or agricultural chemical technical intensification led to a deepening of environmental topics and social acceptance With these societal changes the basis for an ecologically and socially fair production was set New political structures and decisions in the late 80

s and early 90 s boosted OA in Germany Eastern German organic farmers restructured and enforced themselves to an enhancement of German agriculture after the Wall Fall 1989 The EU regulation on organic farming in 1991 decisively shaped the structure and turned OA to a lucratively subsidised business In the following years until today OA in Germany was skyrocketing in farming and production as well as in consumption From a niche product in the 80 s to economic importance in the new millennium organic products entered the mainstream market Today Germany is Europe s biggest organic consumer and its fourth biggest organic producer The demand for organic products is exceeding national supply therefore Germany is also the second biggest importer of organic products Wholesaler conventional food retailer and organic retail chains realised the market value of organic products Thanks to conventional super markets organic products are now obtainable everywhere Organic retail chains such as Alnatura or Denn s are still expanding opening new branches and increasing their assortment Individual organic food stores and direct marketing are not holding the upward trend and getting displaced by organic retail chains The difference between conventional and organic food retailers is shrinking At the same time consumer behaviour is leaning towards organic products but still with the conventional point of view of cheapness and convenience These double standards are symptom and evidence of a fully developed organic market Organic products found their place in German society not because of a complete understanding of original ideals but rather because of the alignment of OA towards the consumer s behaviour

*Food Security in a Developing World* Pardeep Singh, Bendangwapang Ao, Nabajyoti Deka, Chander Mohan, Chhetan Chhoidub, 2024-05-31 The book tries to answer the most fundamental question of whether there is a link between abundant food supply and economic growth with respect to a higher degree of human development In order to have flourishing economic growth within a country the need for a food security system is a must The world as we know is faced with shortages of food supply which has been a major factor in the country s economic development The book is an attempt to understand the problems and current situation of food systems in the developing world It focuses on the pathways to understand the challenges that it faces and predict future scenarios The motive is to create academic literature to understand the basis of sustainable food security The social economic and political factors become the main theme of the book It focuses on the interdisciplinary nature of food security Many a time we only understand the idea of food security through the lens of scientific nature but in the meantime it forgets the other important factors that are governing the issue of food security The inclusion of the cases section in the book helps to outline the current scenarios of the developing world It helps to formulate a pathway or a way forward to understand the causes of food security Food has now become a political context in the international system The need for analyzing the political angle is necessary The context of innovations and technological developments forms an important part of food security The critique of existing policy systems across the developing world is a must need discussion as it is the policies that will make the food systems sustainable Last but not least is to look at how the global food systems work and how far it has been able to fix the problems

of food insecurity in the developing world Overall the book is an excellent interdisciplinary food security literature
