The LEED Guidelines , 2003 A future with a diminishing supply of nonrenewable resources is raising concerns in every aspect of our lives The phrase 1sustainable2 or 1green2 development is being used to describe a wide variety of issues that take these concerns into consideration during the planning design and implementation process In an effort to increase the number of green buildings developed throughout the country the United States Green Building Council USGBC established the Leadership in Energy and Environmental Design LEED Guidelines The guidelines are a framework which assists members of a development team to quantify whether or not a project is in fact 1green2 or 1sustainable2 The guidelines provide a step by step approach within several categories associated with green development The goals of this paper will be to explore how the guidelines have already been implemented on a city level in an effort to encourage the development of green buildings Along with an understanding of how the guidelines have been used to promote green development there will be a discussion of what the potential benefits of green development would be if implemented on a county level and why such practices have not already occurred
