Typhoid or Typhoid fever, also called enteric fever, is a potentially fatal infection caused by the bacteria *Salmonella typhi* (Enterobacteriaceae family). The typhoid fever is very contagious and can spread through the infected person's faeces or, less frequently, through urine. Typhoid affects around 2.6 crore people each year, resulting in 2,15,000 deaths worldwide.

Children are especially vulnerable to typhoid in places with insufficient access to safe drinking water and sanitation.
