What Not How The Business Rules Approach To Application Development:

What Not how C. J. Date, 2000 What I think Date has done is nothing less than to lay out the foundational concepts for the next generation of business logic servers based on predicate logic Such a breakthrough should revolutionize application development in our industry and take business rules to their fullest expression Ronald G Ross Principal Business Rule Solutions LLC Executive Editor DataToKnowledge Newsletter The way we build computer applications is about to change dramatically thanks to a new development technology known as business rules The key idea behind the technology is that we can build applications declaratively instead of procedurally that is we can simply state WHAT needs to be done instead of HOW to do what needs to be done The advantages are obvious ease and rapidity of initial development and subsequent maintenance hardware and software platform independence overall productivity business adaptivity and more What Not How The Business Rules Approach to Application Development is a concise and accessible introduction to this new technology It is written for both managers and technical professionals The book consists of two parts Part I presents a broad overview of what business rules are all about Part II then revisits the ideas in Part I and shows how they fit squarely into the solid tradition of relational technology Topics covered include Presentation rules Database and application rules Building on the data model Potential advantages and disadvantages A new look at relational fundamentals Business rules and the relational model Overall the book provides a good grounding in an important new technology one poised to transform the way we do business in the IT world 0201708507B04062001
