El-Bendary, 2018-03-24 This book introduces wireless personal communications from the point of view of wireless communication system researchers Existing sources on wireless communications put more emphasis on simulation and fundamental principles of how to build a study model In this volume the aim is to pass on to readers as much knowledge as is essential for completing model building of wireless communications focusing on wireless personal area networks WPANs This book is the first of its kind that gives step by step details on how to build the WPANs simulation model It is most helpful for readers to get a clear picture of the whole wireless simulation model by being presented with many study models The book is also the first treatise on wireless communication that gives a comprehensive introduction to data length complexity and the computational complexity of the processed data and the error control schemes This volume is useful for all academic and technical staff in the fields of telecommunications and wireless communications as it presents many scenarios for enhancing techniques for weak error control performance and other scenarios for complexity reduction of the wireless data and image transmission Many examples are given to help readers to understand the material covered in the book Additional resources such as the MATLAB codes for some of the examples also are presented

*Wireless Personal Communications* Jeffrey H. Reed, Theodore S. Rappaport, Brian D. Woerner, 2012-11-06 The wireless industry is growing at a phenomenal rate Cellular subscribers are increasing at a rate of 45% per year the market for wireless local loop service is growing at a rate of 42% and the wireless local area network market is growing at a rate of 61 % This growth and potential for future growth has motivated companies to commit 20 billion in obtaining 90 MHz of PCS spectrum during the recent FCC auctions in the

United States Obviously spectrum is a costly but critical resource Efficient utilization of this resource is essential for profitable wireless service To meet this challenge researchers in wireless communications are tenaciously developing more spectrally efficient modulation techniques planning tools for efficient communication system layout and digital signal processing techniques for more robust communications The papers and lectures presented in this book were originally given at the Sixth Annual Virginia Tech Symposium on Wireless Personal Communications and cover a broad range of topics in wireless communications The majority of the papers are relevant to creating higher capacity spectrally efficient systems with greater coverage Topics include adaptive antenna array measurements and algorithm comparisons Cellular Digital Packet Data deployment guidelines speech coding techniques wireless system design methodology and propagation measurements in hostile or previously unexplored channels
